Load Charts with a Built in Safety Factor (Refer to current Listing Reports for up to date load tables)

All of Premier's load charts have a built-in safety factor. We have taken our SIPs products' ultimate load at failure and divided this number by 3. The result is then used as the design load value.

Table 1: Maximum Allowable Uniform Transverse Load (psf) - Type S Panels 1,3

Panel Core						Panel S	pan (ft)		V

Table values assume a simply supported panel with 1.5 in. of continuous bearing on facing at supports. Permanent loads, such as dead load, shall not exceed 0.25 times the tabulated load. Panels shall use OSB surface splines not less than 7/16 in. thick inserted below the facing on each side of

An asterisk (*) indicates the value shown is governed by the average peak load divided by 3.

the panel.

² Deflection limit shall be selected by building designer based on the serviceability requirements of the structure and the requirements of adopted

building code.

Tabulated values for 8 ft walls apply to panels constructed with the OSB strength axis oriented either parallel or perpendicular to supports. Tabulated values for 8 ft walls apply to panels constructed with the OSB strength axis oriented either parallel or perpendicular to supports. Tabulated values for other lengths are based on the strong-axis of the facing material oriented parallel to the span direction.

Panels spanning 4 ft shall be a minimum of 8 ft long spanning a minimum of two 4 ft spans. No single span condition is allowed.

For wall panel capacities utilizing a zero bearing configuration (Figure 2), the allowable load shall be determined using C_v=0.86.

11 ¹ / ₄	4,500	4,333	4,167	3,750	3,750	3,333					

For SI: 1 inch = 25.4 mm, 1 plf = 14.6 N/m, 1 foot = 304.8 mm.

¹Floor panels must have a minimum ³/₄-inch-thick top skin or a minimum ⁷/₁₆-inch-thick top skin overlaid with minimum ⁷/₁₆-inch-thick finish flooring perpendicular to the panels.

²The tabulated values are for roof and floor panels installed with simply supported single span conditions with panels supported at each end on a minimum 1¹/₂-inch-wide continuous support in contact with the panel face. Tabulated values are applicable to panels installed with the strong axis of the OSB panel facers parallel to the panel span.

³Allowable loads with an asterisk, *, indicates a capacity based on the average peak test load divided by 3.

⁴Panels spanning 4 feet shall be a minimum of 8 feet long spanning a minimum of two 4 foot spans. No single span conditions must be

 $^{^{5}}$ 3 1 / $_{2}$ -inch thick core panels must be limited to a maximum span of 10 feet when used in roof applications.

⁶5¹/₂-inch thick core panels must be limited to a maximum span of 14 feet when used in roof applications.

 $^{^{7}7^{1}}I_{4}$ -inch thick core panels must be limited to a maximum span of 18 feet when used in roof applications.

⁸9¹/₄ and 11¹/₄-inch thick core panels shall be limited to a maximum span of 20 feet when used in roof applications.

¹For the allowable axial load on the fire-resistance-rated assembly, see Section 4.2.6.

²For combined loads; requirements in Section 4.1 must be applied.

³The tabulated loads are uniform axial loads applied concentrically to the full thickness of the panels, including panel facings.

⁴The tabulated values are for panels installed with strong axis of the OSB panel facers parallel to the wall height (panel span) and on concrete foundations. The member, element, or structure supporting the bearing wall panels, as shown in Figures 7, 8 and 9, must be designed for the bearing stress of the wall panels to the satisfaction to the code official.

¹For the allowable axial load on fire-resistance-rated assembly, see Section 4.2.7.

²For combined loads; requirements in Section 4.1 must be applied.

³The tabulated loads are uniform axial loads applied concentrically to the full thickness of the panels, including panel facings.

⁴The tabulated values are for panels installed with strong axis of the OSB panel facers parallel to the wall height (panel span) on concrete foundations. The member, element, or structure supporting the bearing wall panels, as shown in Figures 7, 8 and 9, must be designed for the bearing stress of the wall panels to the satisfaction to the code official.

2	L/360	1400	1055	792	610	480	384	313	257		
	L/240	1400	1245	792	864	720	577	469	386		

Values listed for each deflection represent the least value of the bearing capacity of the trimmer, shear or bending capacity of the header or the actual deflection at the design load.

Refer to Technical Bulletin #30 for supporting headers in Premier SIPs wall panels (www.premiersips.com).

Note: Trimmer stud design capacities must be reviewed.

USGS Design Maps Detailed Report

2012/2015 International Building Code (41.36°N, 111.74°W)

Site Class D - "Stiff Soil", Risk Category I/II/III

Section 1613.3.1 — Mapped acceleration parameters

Note: Ground motion values provided below are for the direction of maximum horizontal spectral response acceleration. They have been converted from corresponding geometric mean ground motions computed by the USGS by applying factors of 1.1 (to obtain S_{s}) and 1.3 (to obtain S_{i}). Maps in the 2012/2015 International Building Code are provided for Site Class B. Adjustments for other Site Classes are made, as needed, in Section 1613.3.3.

From Figure 1613.3.1(1)[1]

 $S_s = 0.806 g$

From Figure 1613.3.1(2)[2]

 $S_1 = 0.267 g$

Section 1613.3.2 — Site class definitions

The authority having jurisdiction (not the USGS), site-specific geotechnical data, and/or the default has classified the site as Site Class D, based on the site soil properties in accordance with Section 1613.

2010 ASCE-7 Standard - Table 20.3-1 SITE CLASS DEFINITIONS

\overline{V}_{s}	\overline{N} or \overline{N}_{ch}	- s _u
>5,000 ft/s	N/A	N/A
2,500 to 5,000 ft/s	N/A	N/A

600 to 1,200 ft/s	15 to 50	1,000 to 2,000 psf
<600 ft/s	<15	<1,000 psf
characteristics: • Plasticity inde • Moisture cont	x <i>PI</i> > 20, ent <i>w</i> ≥ 409	∕₀, and
	>5,000 ft/s 2,500 to 5,000 ft/s 1,200 to 2,500 ft/s 600 to 1,200 ft/s <600 ft/s Any profile with more characteristics: • Plasticity inde • Moisture cont	>5,000 ft/s N/A 2,500 to 5,000 ft/s N/A 1,200 to 2,500 ft/s >50 600 to 1,200 ft/s 15 to 50 <600 ft/s <15 Any profile with more than 10 ft

F. Soils requiring site response analysis in accordance with Section 21.1

See Section 20.3.1

For SI: $1ft/s = 0.3048 \text{ m/s} 1lb/ft^2 = 0.0479 \text{ kN/m}^2$

Section 1613.3.3 — Site coefficients and adjusted maximum considered earthquake spectral response acceleration parameters

TABLE 1613.3.3(1)
VALUES OF SITE COEFFICIENT F_a

Site Class	Mapped Spectral Response Acceleration at Short Period											
	S _s ≤ 0.25	$S_s = 0.50$	$S_s = 0.75$	$S_s = 1.00$	S _s ≥ 1.25							
А	0.8	0.8	0.8	0.8	0.8							
В	1.0	1.0	1.0	1.0	1.0							
С	1.2	1.2	1.1	1.0	1.0							
D	1.6	1.4	1.2	1.1	1.0							
Е	2.5	1.7	1.2	0.9	0.9							
F		See Se	ction 11.4.7 of	ASCE 7								

Note: Use straight-line interpolation for intermediate values of $\ensuremath{S_{\scriptscriptstyle S}}$

For Site Class = D and S_s = 0.806 g, F_a = 1.178

TABLE 1613.3.3(2)
VALUES OF SITE COEFFICIENT F_v

Site Class	Мар	ped Spectral R	ed Spectral Response Acceleration at 1-s Period										
	$S_1 \le 0.10$	$S_1 = 0.20$	$S_i = 0.30$	$S_1 = 0.40$	$S_i \geq 0.50$								
А	0.8	0.8	0.8	0.8	0.8								
В	1.0	1.0	1.0	1.0	1.0								
С	1.7	1.6	1.5	1.4	1.3								
D	2.4	2.0	1.8	1.6	1.5								
Е	3.5	3.2	2.8	2.4	2.4								
F		See Se	See Section 11.4.7 of ASCE 7										

Note: Use straight-line interpolation for intermediate values of S₁

For Site Class = D and S_1 = 0.267 g, F_v = 1.866

Equation (16-37):

 $S_{MS} = F_a S_S = 1.178 \times 0.806 = 0.949 g$

Equation (16-38):

 $S_{M1} = F_{\nu}S_{1} = 1.866 \times 0.267 = 0.498 g$

Section 1613.3.4 — Design spectral response acceleration parameters

Equation (16-39):

 $S_{DS} = \frac{2}{3} S_{MS} = \frac{2}{3} \times 0.949 = 0.633 g$

Equation (16-40):

 $S_{D1} = \frac{2}{3} S_{M1} = \frac{2}{3} \times 0.498 = 0.332 g$

Section 1613.3.5 — Determination of seismic design category

TABLE 1613.3.5(1)

SEISMIC DESIGN CATEGORY BASED ON SHORT-PERIOD (0.2 second) RESPONSE ACCELERATION

MAKINE OF C		RISK CATEGORY										
VALUE OF S _{DS}	I or II	III	IV									
S _{ps} < 0.167g	Α	А	Α									
0.167g ≤ S _{ps} < 0.33g	В	В	С									
0.33g ≤ S _{DS} < 0.50g	С	С	D									
0.50g ≤ S _{DS}	D	D	D									

For Risk Category = I and S_{DS} = 0.633 g, Seismic Design Category = D

TABLE 1613.3.5(2)

SEISMIC DESIGN CATEGORY BASED ON 1-SECOND PERIOD RESPONSE ACCELERATION

VALUE OF C	RISK CATEGORY										
VALUE OF S _{D1}	I or II	III	IV								
S _{D1} < 0.067g	А	A	А								
0.067g ≤ S _{D1} < 0.133g	В	В	С								
0.133g ≤ S _{D1} < 0.20g	С	С	D								
0.20g ≤ S _{D1}	D	D	D								

For Risk Category = I and S_{D1} = 0.332 g, Seismic Design Category = D

Note: When S_1 is greater than or equal to 0.75g, the Seismic Design Category is **E** for buildings in Risk Categories I, II, and III, and **F** for those in Risk Category IV, irrespective of the above.

Seismic Design Category \equiv "the more severe design category in accordance with Table 1613.3.5(1) or 1613.3.5(2)" = D

Note: See Section 1613.3.5.1 for alternative approaches to calculating Seismic Design Category.

Table 10: Allowable In-Plane Shear Strength (Pounds per Foot) for SIP Shear Walls (Seismic Loads in Seismic Design Categories A, B, C, D, E and F)^{1,2}

	Framing	M	inimum Facing Connection		Shear Strengt
Spline Type ³	Minimum SG ⁴	Chord ²	Plate ²	Spline ³	h ⁵ (plf)
	0.50	0.113"x 2-1/4" nails, 6" on center	0.113"x 2-1/4" nails, 3" on center	(7/16" thick, 3" wide spline) 0.113"x 2-1/4" nails 6" on center	360
	0.50	0.113"x 2-1/4" nails, 6" on center	0.113"x 2-1/4" nails, 6" on center	(3/4" thick, 3" wide spline) 0.113"x 2-1/4" nails, 6" on center	360
Block, Surface, or Lumber Spline (Type S, Type L)	0.50	0.113" x 2-3/8" nails, 3" on center Staggered (3/8" edge distance and 3/4" edge distance)	0.113" x 2-3/8" round head nails, 3" on center Staggered (3/8", 3/4" edge distance)	(23/32" thick, 3" wide spline) 0.413" x 2-3/8" nails 3" on center Staggered (3/8" edge distance and 3/4" edge distance)	720
	0.50	0.113" x 2-3/8" nails, 2" on center Staggered (3/8" edge distance and 3/4" edge distance)	0.113" x 2-3/8" round head nails, 2" on center Staggered (3/8", 3/4" edge distance)	(23/32" thick, 3" wide spline) 0.113" x 2-3/8" nails, 2" on center Staggered (3/8" edge distance and 3/4" edge distance)	920

¹ Shear strength values, as published in this table, are limited to assemblies resisting wind or seismic forces where the aspect ratio (height:width) does not exceed 1:1 for Type S panel connections or 2:1 for Type L panel connections. (IM 014 ACU17)

² Chords, hold-downs and connections to other structural elements must be designed by a registered design professional in accordance with accepted engineering practice.

³ Spline type at interior panel-to-panel joints only, solid chord members are required at each end of each shear wall segment.

⁴ Required connections must be made on each side of the panel. Dimensional or engineered lumber shall have an equivalent specific gravity not less than specified.

⁵ For design to resist seismic forces, shear wall height-width ratios greater than 2:1, but not exceeding 3.5:1, are permitted for assemblies using lumber splines provided the allowable shear strength values in this table are multiplied by 2w/h.

B5 - RIDGE SUPPORT

CODE REFERENCES

Calculations per AISC 360-10, IBC 2015, ASCE 7-10

Load Combination Set: ASCE 7-10

Material Properties

Analysis Method: Allowable Strength Design

Beam Bracing:

Beam is Fully Braced against lateral-torsional buckling

Bending Axis: Major Axis Bending Fy: Steel Yield:

50.0 ksi

E: Modulus :

29,000.0 ksi

Applied Loads

Service loads entered. Load Factors will be applied for calculations.

Beam self weight calculated and added to loading

Load for Span Number 1

Uniform Load: D = 0.01580, Lr = 0.020, S = 0.2640 ksf, Tributary Width = 7.0 ft, (ROOF)

Load for Span Number 2

Uniform Load: D = 0.01580, Lr = 0.020, S = 0.2640 ksf, Extent = 0.0 ->> 4.0 ft, Tributary Width = 7.0 ft, (ROOF)

Point Load: D = 1.170, Lr = 1.290, S = 14.630 k @ 4.0 ft, (B3) Point Load: D = 1.210, Lr = 1.420, S = 17.280 k @ 4.0 ft, (B4)

Description:

B6 - w/ SHEAR WALLS EACH END - STEEL

CODE REFERENCES

Calculations per AISC 360-10, IBC 2015, ASCE 7-10

Load Combination Set: ASCE 7-10

Material Properties

Bending Axis:

Analysis Method: Allowable Strength Design

Beam Bracing: Beam is Fully Braced against lateral-torsional buckling

Major Axis Bending

Fy: Steel Yield: E: Modulus :

50.0 ksi

29,000.0 ksi

Applied Loads

Service loads entered. Load Factors will be applied for calculations.

Beam self weight calculated and added to loading

Load for Span Number 1

Uniform Load: D = 0.01580, Lr = 0.020, S = 0.2640 ksf, Tributary Width = 7.0 ft, (ROOF) Uniform Load: D = 0.01580, Lr = 0.020, S = 0.4440 ksf, Tributary Width = 8.50 ft, (OVERHANG)

Load(s) for Span Number 2

Point Load: D = 1.680, Lr = 1.280, S = 21.950 k @ 1.50 ft, (B4)

Table values assume a simply supported panel with 1.5 in. of continuous bearing on facing at supports. Permanent loads, such as dead load, shall not exceed 0.25 times the tabulated load. Splines consist of #2 or better, Hem-Fir, 1.5 in. wide with a depth equal to the core thickness, spaced to provide not less than two members for every 48 in. of panel width.

An asterisk () indicates the value shown is governed by the average peak load divided by 3.

Table 4: Maximum Allowable Uniform Axial Load (plf) - Type S Panels 1,2,3,4

Splines consist of #2 or better, Hem-Fir, 1.5 in. wide with a depth equal to the core thickness, spaced to provide not less than two members for every 48 in. of panel width. Permanent loads, such as dead load, shall not exceed 0.50 times the tabulated load.

MAX LOAD BIB W=(16,8+20+264)1/2 = 2249P2F

Deflection limit shall be selected by building designer based on the serviceability requirements of the structure and the requirements of adopted building code.

3 Tabulated values for 8 ft walls apply to panels constructed with the OSB strength axis oriented either parallel or perpendicular to

supports. Tabulated values for other lengths are based on the strong-axis of the facing material oriented parallel to the span direction.

⁴ Panels spanning 4 ft shall be a minimum of 8 ft long spanning a minimum of two 4 ft spans. No single span condition is allowed.

Uniform Axial loads may be applied in accordance with Section 5.5.1. Concentrated point loads shall be addressed in accordance with Section 5.5.2 and Table 6.

Both facings must bear on the supporting foundation or structure.

⁴ Tabulated values for 8 ft walls apply to panels constructed with the OSB strength axis oriented either parallel or perpendicular to supports.

^{*} Limited by 1/8 in. deflection (compression)

Axial loads shall be applied concentrically to the top of the panel through repetitive members spaced not more than 24 in. on center. Such members shall be fastened to a rim board or similar member to distribute along the top of the SIP panel.

Roth feelings must be a set to set to

Both facings must bear on the supporting foundation or structure.

⁴ Tabulated values for 8 ft walls apply to panels constructed with the OSB strength axis oriented either parallel or perpendicular to supports.

^{*} Limited by 1/8 in. deflection (compression)

1111/4	3,890	3,890	3,890	3,890	3,890	3,333				

For SI: 1 inch = 25.4 mm, 1 plf = 14.6 N/m, 1 foot = 304.8 mm.

TABLE 6-ALLOWABLE UNIFORM AXIAL LOADS FOR PREMIER TYPE L PANELS (plf) 1.2.3.4

PANEL CORE						
THICKNESS (inches)	8 ft	10 ft	12 ft	16 ft	20 ft	24 ft
31/2	4,725	3,905	3,095	2,350		
5 ¹ / ₂	5,850	5,890	4,280	4,310	2,933	
71/4	6,850	6,110	5,555	5,180	4,835	4,080
91/4	5,470	5,470	5,470	5,470	5,470	4,250
11 ¹ / ₄	4,500	4,333	4,167	3,750	3,750	3,333

For SI: 1 inch = 25.4 mm, 1 plf = 14.6 N/m, 1 foot = 304.8 mm.

¹Floor panels must have a minimum ³/₁₋inch-thick top skin or a minimum ⁷/₁₆-inch-thick top skin overlaid with minimum ⁷/₁₆-inch-thick finish flooring perpendicular to the panels.

²The tabulated values are for roof and floor panels installed with simply supported single span conditions with panels supported at each end on a minimum 11/2-inch-wide continuous support in contact with the panel face. Tabulated values are applicable to panels installed with the strong axis of the OSB panel facers parallel to the panel span.

³Allowable loads with an asterisk, *, indicates a capacity based on the average peak test load divided by 3.

⁴Panels spanning 4 feet shall be a minimum of 8 feet long spanning a minimum of two 4 foot spans. No single span conditions must be permitted. $3\frac{1}{2}$ -inch thick core panels must be limited to a maximum span of 10 feet when used in roof applications.

 $^{^{6}5^{1/2}}$ -inch thick core panels must be limited to a maximum span of 14 feet when used in roof applications.

⁷7¹/₄-inch thick core panels must be limited to a maximum span of 18 feet when used in roof applications. 8 9 1 /₄ and 11 1 /₄-inch thick core panels shall be limited to a maximum span of 20 feet when used in roof applications.

¹For the allowable axial load on the fire-resistance-rated assembly, see Section 4.2.6.

²For combined loads; requirements in Section 4.1 must be applied.

³The tabulated loads are uniform axial loads applied concentrically to the full thickness of the panels, including panel facings.

⁴The tabulated values are for panels installed with strong axis of the OSB panel facers parallel to the wall height (panel span) and on concrete foundations. The member, element, or structure supporting the bearing wall panels, as shown in Figures 7, 8 and 9, must be designed for the bearing stress of the wall panels to the satisfaction to the code official.

¹For the allowable axial load on fire-resistance-rated assembly, see Section 4.2.7.

²For combined loads; requirements in Section 4.1 must be applied.

³The tabulated loads are uniform axial loads applied concentrically to the full thickness of the panels, including panel facings.

⁴The tabulated values are for panels installed with strong axis of the OSB panel facers parallel to the wall height (panel span) on concrete foundations. The member, element, or structure supporting the bearing wall panels, as shown in Figures 7, 8 and 9, must be designed for the bearing stress of the wall panels to the satisfaction to the code official.

Table 10: Allowable In-Plane Shear Strength (Pounds per Foot) for SIP Shear Walls (Seismic Loads in Seismic Design Categories A. B. C. D. E and F)^{1,2}

	Framing	M	inimum Facing Connection	ons²	Shear Strengt
Spline Type ³	Minimum SG ⁴	Chord ²	Plate ²	Spline ³	h ⁵ (plf)
	0.50	0.113"x 2-1/4" nails, 6" on center	0.113"x 2-1/4" nails, 3" on center	(7/16" thick, 3" wide spline) 0.113"x 2-1/4" nails 6" on center	360
Proof.	0.50	0.113"x 2-1/4" nails, 6" on center	0.113"x 2-1/4" nails, 6" on center	(3/4" thick, 3" wide spline) 0.113"x 2-1/4" nails, 6" on center	360
Block, Surface, or Lumber Spline (Type S, Type L)	0.50	0.113" x 2-3/8" nails, 3" on center Staggered (3/8" edge distance and 3/4" edge distance)	0.113" x 2-3/8" round head nails, 3" on center Staggered (3/8", 3/4" edge distance)	(23/32" thick, 3" wide spline) 0.113" x 2-3/8" nails, 3" on center Staggered (3/8" edge distance and 3/4" edge distance)	720
	0.50	0.113" x 2-3/8" nails, 2" on center Staggered (3/8" edge distance and 3/4" edge distance)	0.113" x 2-3/8" round head nails, 2" on center Staggered (3/8", 3/4" edge distance)	(23/32" thick, 3" wide spline) 0.113" x 2-3/8" nails, 2" on center Staggered (3/8" edge distance and 3/4" edge distance)	920

¹ Shear strength values, as published in this table, are limited to assemblies resisting wind or seismic forces where the aspect ratio (height:width) does not exceed 1:1 for Type S panel connections or 2:1 for Type L panel connections. (IM 014 ACU17)

⁵ For design to resist seismic forces, shear wall height-width ratios greater than 2:1, but not exceeding 3.5:1, are permitted for assemblies using lumber splines provided the allowable shear strength values in this table are multiplied by 2w/h.

This listing report is intended to indicate that NTA, Inc. has evaluated the product described and found it to be eligible for labeling. Product not labeled as specified herein is not covered by this report. NTA, Inc. makes no warranty, either expressed or implied, regarding the product covered by this report.

² Chords, hold-downs and connections to other structural elements must be designed by a registered design professional in accordance with accepted engineering practice.

³ Spline type at interior panel-to-panel joints only, solid chord members are required at each end of each shear wall segment.

⁴ Required connections must be made on each side of the panel. Dimensional or engineered lumber shall have an equivalent specific gravity not less than specified.

FOOTNOTES

- 1.) ALL NAILS ARE TO BE COMMON NAILS WITH 10d HAVING A 1-5/8" MINIMUM PENETRATION INTO FRAMING AND 8d HAVING A 1-1/2" MINIMUM PENETRATION INTO FRAMING.

- 2.) ALL NAILS ARE TO HAVE 1/2" MINIMUM EDGE DISTANCE FROM PANEL ENDS AND EDGES. DO NOT BREAK SURFACE LAM OF PLY WITH NAIL HEAD.
 3.) 5/8" DIAMETER ANCHOR BOLTS x 7 in MIN INTO CONCRETE FOOTINGS. NOTE: ADDITIONAL THREAD LENGTH IS REQUIRED A1 3x SILLS.
 4.) 5/8" DIAMETER A36 THREADED RODS x 10 in MIN EMBED INTO SIMPSON SET.XP EPOXY IN CONCRETE FOOTINGS MAY BE USED FOR REPAIR AND RETROFIT UNDER SPECIAL INSPECTION 5.) USE 16d FOR 2x AND 30d FOR 3x COMMON NAILS FOR CONNECTING PLATES TO JOISTS AND BLOCKING. USE 2x NOMINAL BLOCKING OR RIM MIN. FOR ALL 16d SILL NAILS AND 3x BLOCKING OR RIM FOR ALL 30d SILL NAILS SHALL BE AT LEAST 1/2" FROM ALL EDGES OF SILL AND BLOCKING. WHERE MULTIPLE ROWS ARE REQUIRED, SPACE ROWS 1/2" MIN. AND TAKE CARE NOT TO SPLIT THE WOOD
 - MIN. 3X NOMINAL FRAMING SHALL BE USED AT ALL ADJOINING PANEL EDGES AT ALL WALLS WITH PLY TWO SIDES OR SINGLE SIDED WALL WITH 10d NAILS @ 3" o.c. OR LESS WHERE PANELS ARE APPLIED TO BOTH SIDES OF THE STUDS, PANEL JOINTS SHALL BE OFFSET TO FALL ON DIFFERENT FRAMING MEMBERS OR FRAMING
 - SHALL BE 3x NOMINAL AND ALL NAILS SHALL BE STAGGERED. 6.)
- 8) LOAD VALUES ARE BASED ON CBC AND LABC TABLE 2306.41.
 9) SDS1/4x6" WOOD SCREWS BY SIMPSON SHALL COMPLY WITH LARR 25711 AND ICC-ES ESR-2236. NOTE: FOR 2x SILL AND 3/4" MAX. DIAPHRAGM SHEATHING, USE SDS1/4x4-1/2" O.K.
 10) WHERE CLIPS SPACING PREVENTS CLIPS ON A SINGLE SIDE FROM FITTING, ALTERNATE CLIPS ON EACH SIDE SPACING ABOVE FOR EACH LINE OF CLIPS.

GENERAL NOTES:

- A) SHEAR WALL VALUES ARE FROM AWC NDS AND ASC SDPWS.

 B) ALL PLYWOOD IS TO BE STRUCTURAL I GRADE w/ (4) PLIES MINIMUM, AND ALL SHALL BE APPLIED DIRECTLY TO FRAMING.

 C) PLY MAY BE APPLIED EITHER VERTICALLY OF HORIZONTFALLY ACROSS STUDS.

 D) WHERE STUDS ARE SPECED AT 16" o.c., INTERMEDIATE STUDS ARE TO BE NAILED AT 12" o.c. WHERE STUDS ARE SPACED FARTHER THAN 16" o.c., INTERMEDIATE STUDS ARE TO BE STAGGERED.

 E) ALL PLYWOOD JOINT NAILING AND SILL NAILING IS TO BE STAGGERED.

 F) ALL ANCHOR BOLTS ARE TO USE 3"X3" x 229" PLATE WASHERS w/ DIAGONALLY SLOTTED HOLES.

 G) ANCHOR BOLTS ARE TO BE INSTALLED INTO 2500 psi MINIMUM CONORETE AT 28 DAYS.

 H) PREADLY PLOIT HOLES FOR SILL THATE LAG SCREWS 40%-70% OF THREADED SHANK DIA. & FULL DIA. FOR SMOOTH SHANK PORTION. LAG INTO CENTERLINE OF BLOCK OR RIM BELOW PLY DIAPHRAGM.

 J) PROVIDE PREDRILLED HOLES 65% TO 75% OF THE NAMETER FOR NAILS LARGER THAN 204.

 K) STRUCTURAL OBSERVATION IS REQUIRED FOR ALL PANNELS.

Description: FELDSPAR UVN LOWER FLOOR - B22

CODE REFERENCES

Calculations per AISC 360-10, IBC 2015, ASCE 7-10

Load Combination Set: ASCE 7-10

Material Properties

Analysis Method: Allowable Strength Design

Beam Bracing: Beam is Fully Braced against lateral-torsional buckling

Bending Axis: Major Axis Bending

Fy : Steel Yield : E: Modulus : 50.0 ksi

29,000.0 ksi

Applied Loads

Service loads entered. Load Factors will be applied for calculations.

Beam self weight calculated and added to loading

Load for Span Number 1

Uniform Load: D = 0.020, L = 0.040, S = 2.0 ksf, Tributary Width = 3.0 ft, (FLOOR)

Point Load: E = 13.90 k @ 0.0 ft, (HOLD DOWN OVERSTRENGTH)

Load for Span Number 2

Uniform Load: D = 0.020, L = 0.040 ksf, Tributary Width = 3.0 ft, (FLOOR)

Load for Span Number 3

Uniform Load: D = 0.020, L = 0.040, S = 2.0 ksf, Tributary Width = 3.0 ft, (FLOOR)

Point Load: E = 13.90 k @ 4.0 ft, (HOLD DOWN OVERSTRENGTH)

DESIGN SUMMARY

Code References

Calculations per ACI 318-14, IBC 2015, CBC 2016, ASCE 7-10

Load Combinations Used: ASCE 7-10

General Information

f'c : Concrete 28 day strength	=	2.50 ksi
E=	=	3,122.0 ksi
Density	=	150.0 pcf
β	=	0.850
fy - Main Rebar	=	60.0 ksi
É - Main Rebar	=	29,000.0 ksi
Allow. Reinforcing Limits		ASTM A615 Bars Used
Min. Reinf.	=	1.0 %
Max. Reinf.	=	8.0 %

6.0 ft Overall Column Height Top & Bottom Pinned End Fixity

Brace condition for deflection (buckling) along columns:

X-X (width) axis:

Unbraced Length for X-X Axis buckling = 6.0 ft, K = 1.0

Y-Y (depth) axis:

Unbraced Length for X-X Axis buckling = 6.0 ft, K = 1.0

Column Cross Section

Column Dimensions:

12.0in Square Column, Column Edge to

Rebar Edge Cover = 2.0in

Column Reinforcing:

4 - #6 bars @ corners,, 1 - #6 bars top &

bottom between corner bars, 1 - #6 bars left

& right between corner bars

Applied Loads

Entered loads are factored per load combinations specified by user.

Column self weight included: 900.0 lbs * Dead Load Factor

AXIAL LOADS . . .

MAX: Axial Load at 6.0 ft above base, D = 10.0, LR = 10.0, L = 5.0, S = 90.0 k

Cross Section & Reinforcing Details

Rectangular Section, Width = 12.0 in, Height = 24.0 in

Span #1 Reinforcing....

4-#6 at 2.0 in from Bottom, from 0.0 to 4.0 ft in this span

Span #2 Reinforcing....

4-#6 at 2.0 in from Bottom, from 0.0 to 16.0 ft in this span

Span #3 Reinforcing....

4-#6 at 2.0 in from Bottom, from 0.0 to 4.0 ft in this span

Applied Loads

4-#6 at 2.0 in from Top, from 0.0 to 4.0 ft in this span

4-#6 at 2.0 in from Top, from 0.0 to 16.0 ft in this span

4-#6 at 2.0 in from Top, from 0.0 to 4.0 ft in this span

Service loads entered. Load Factors will be applied for calculations.

Beam self weight calculated and added to loads

Load for Span Number 1

Uniform Load: D = 0.020, L = 0.040, S = 2.0 ksf, Tributary Width = 3.0 ft, (FLOOR)

Point Load: E = 13.90 k @ 0.0 ft, (HOLD DOWN OVERSTRENGTH)

Load for Span Number 2

Uniform Load: D = 0.020, L = 0.040 ksf, Tributary Width = 3.0 ft, (FLOOR)

Load for Span Number 3

Uniform Load: D = 0.020, L = 0.040, S = 2.0 ksf, Tributary Width = 3.0 ft, (FLOOR)

Point Load: E = 13.90 k @ 4.0 ft, (HOLD DOWN OVERSTRENGTH)
