Storm water pollution prevention plan

- 1. Approximant area disturbed will be 60'X 80'
- 2. I will be responsible for the site during and after construction
- 3. There is a fence between my house and the neighbors and I will keep area clean from trash and debris going into the neighbor's yards.
- 4. The excavated material will remain in the construction area and will be uses for back fill when footings and foundation is complete.
- 5. I will have a concreate wash out located 20 feet to the north of the building site.
- 6. The building is located behind my residence so we will use house for bathroom needs.
- 7. There is an asphalt drive way from the main road to back of house 200' long and from there on its road base already in place to the building site.
- 8. I will sweep and dirt or mud from road way.
- 9. There is a slue approx. 250' north from building site. There is a cement pipe that runs on top of my property in front of the slue that feeds a pond west of my property there is a 10' drop after the concrete pipe that is covered with vegetation but no way for water to get past pipe. There is a drainage ditch approx. 300'. Any water from my property does not run to that ditch.
- 10. The rain/storm water that lands on my property soaks in the ground. There is no drain system in that area.

Thank You,

Alan Murray
