General Notes

1. CONSTRUCTION STAKING TO BE PROVIDED BY REEVE & ASSOCIATES, INC.
2. ANY MODIFICATION TO THIS CONSTRUCTION PACKAGE OR TO THE CONSTRUCTION SCHEDULE SHALL BE APPROVED BY THE ENGINEER PRIOR TO SAID APPROVAL. ALL IMPROVEMENT DRAWINGS SHALL BE RESUBMITTED AND APPROVED BY THE ARCHITECT.
3. THE CONTRACTOR SHALL LOCATE, RETAIN AND PROTECT ALL EXISTING UTILITIES UNLESS OTHERWISE DIRECTED BY THE OWNER OR OWNER'S REPRESENTATIVE.
4. THE CONTRACTOR SHALL MAINTAIN 10 FOOT HORIZONTAL AND 18 INCH VERTICAL SEPARATION, CULINARY WATER LINES, SANITARY SEWER, AND STORM DRAIN LINES.
5. THE CONTRACTOR SHALL INSTALL ALL SANITARY SEWER MAINS, SERVICE LINES AND STORM DRAIN LINES PRIOR TO INSTALLING ANY WATER SYSTEM IMPROVEMENTS. ADJUST WATER MAIN DEPTH PER JURISDICTION AS REQUIRED TO AVOID SANITARY SEWER SERVICE LINES.
6. CONTRACTOR SHALL NOTIFY ARCHITECT OF ALL UTILITY CONFLICTS UPON DISCOVERY.
7. CONTRACTOR SHALL COORDINATE CONSTRUCTION AND INSTALLATION OF ELECTRICAL, TELEPHONE, NATURAL GAS AND CABLE TV SERVICES WITH THE RESPECTIVE UTILITY COMPANY. OWNER SHALL PAY ALL ASSOCIATED UTILITY COMPANY FEES.
8. CONTRACTOR SHALL BE RESPONSIBLE FOR PROPER SLOPE AND CONSTRUCTION OF CONNECTING SEWER PIPING.
9. CONTRACTOR SHALL BE RESPONSIBLE OF PROPER BACKFILLING, COMPACTING, AND PAVEMENT RESTORATION.
10. CONTRACTOR TO OBTAIN ALL NECESSARY PERMIT(S) AND COMPLY WITH ALL PERMITTING REQUIREMENTS.
11. ALL THRUST BLOCKS SHALL BE POURED IN PLACE AGAINST UNDISTURBED SOIL. ALL VALVES, FITTINGS, AND APPURTENANCES TO BE BLOCKED.
12. ALL EXPOSED NUTS AND BOLTS WILL BE COATED WITH A NON-OXIDE WASH AND WRAPPED IN 8-MIL POLYETHYLENE AS DIRECTED BY GEOTECHNICAL STUDY.
13. CONTRACTOR SHALL BE RESPONSIBLE FOR DUST CONTROL ACCORDING TO GOVERNING AGENCIES STANDARDS. WET DOWN DRY MATERIALS AND RUBBISH TO PREVENT BLOWING.
14. CONTRACTOR SHALL BE RESPONSIBLE FOR ANY DAMAGE TO ADJACENT SURFACE IMPROVEMENTS DURING CONSTRUCTION.
15. CONTRACTOR SHALL BE RESPONSIBLE FOR CORRECTING ANY SETTLEMENT OF OR DAMAGE TO EXISTING UTILITIES FOR WARRANTY PERIOD.
16. ALL EXISTING ASPHALT SHALL BE SAW CUT IN NEAT STRAIGHT LINES BY THE CONTRACTOR PRIOR TO EXCAVATION.
17. CONTRACTOR TO INSTALL MAGNETIC LOCATING TAPE CONTINUOUSLY OVER ALL PVC PIPING.
18. THE CONTRACTOR IS RESPONSIBLE TO FURNISH ALL MATERIALS TO COMPLETE PROJECT.
19. TRAFFIC CONTROL IS TO CONFORM TO THE CURRENT CITY AND/OR STATE TRANSPORTATION ENGINEERS' MANUAL.
20. A UPDES GENERAL CONSTRUCTION STORM WATER PERMIT MUST BE OBTAINED BY THE GENERAL CONTRACTOR PRIOR TO COMMENCING CONSTRUCTION.
21. ALL WORK SHALL CONFORM TO WEBER COUNTY STANDARD SPECIFICATIONS AND DRAWINGS.

Engineer's Notice To Contractors
THE EXISTENCE AND LOCATION OF ANY UNDERGROUND UTILITY PIPES OR STRUCTURES SHOWN ON THESE PLANS WERE OBTAINED FROM AVAILABLE INFORMATION PROVIDED BY OTHERS. THE LOCATIONS SHOWN ARE APPROXIMATE AND SHALL BE CONFIRMED IN THE FIELD BY THE CONTRACTOR, SO THAT ANY NECESSARY ADJUSTMENT CAN BE MADE IN ALIGNMENT AND/OR GRADE OF THE PROPOSED IMPROVEMENT. THE CONTRACTOR IS REQUIRED TO CONTACT THE UTILITY COMPANIES AND TAKE DUE PRECAUTIONARY MEASURE TO PROTECT ANY UTILITY LINES SHOWN, AND ANY OTHER LINES OBTAINED BY THE CONTRACTOR'S RESEARCH, AND OTHERS NOT OF RECORD OR NOT SHOWN ON THESE PLANS.

Storm Runoff Calculations

Edgewater Estates-Phase 1

7/31/2012

The following runoff calculations are based on the Rainfall - Intensity - Duration Frequency Curve for the Huntsville, UT area taken from data compiled by NOAA Atlas14, using a 100 year storm.

Runoff storm water has been calculated for two different sets of conditions, one being the existing undeveloped land and the other with land fully improved. The difference between the two quantities will be detained in a holding pond. All water that runs off and over the property at present will be diverted into the holding pond and released at a reduced rate into the existing drainage system.

The calculations are as follows:

1. Runoff from the undeveloped existing land.			
Runoff Coefficient	C =	0.2	
Rainfall Intensity	i =	3.20 IN./HR.	
Runoff Quantity	Q =	CIA	
Acres	A =	3.80 ACRES	
Q(out) = C*I*A =		2.43 CFS	

2. Runoff from developed land			
Runoff Coefficients			
Paved Area	39,774	C = 0.9	
Landscaped Area	97,776	C = 0.2	
Roof	28,173	C = 0.8	
Weighted Runoff Coefficient		C = 0.47	
Rainfall Intensity	i =	varies with time	
Runoff Quantity	Q =	CIA	

3. Detention Basin		
Volume in	Q * t	
Volume out	2.43 * t	

The capacity of the detention basin is calculated as the maximum difference between the volume flowing in and the volume flowing out.

The outflow from the detention basin is limited to outflow if undeveloped.
Use 2.43 cfs for Q outflow

The required volume of the detention basin is **5,917 cubic feet**

USE A **7.2 INCH DIAMETER ORIFICE AT OUTLET**

DETENTION BASIN

Storm Runoff Calculations

Edgewater Estates-Full

7/31/2012

The following runoff calculations are based on the Rainfall - Intensity - Duration Frequency Curve for the Huntsville, UT area taken from data compiled by NOAA Atlas14, using a 100 year storm.

Runoff storm water has been calculated for two different sets of conditions, one being the existing undeveloped land and the other with land fully improved. The difference between the two quantities will be detained in a holding pond. All water that runs off and over the property at present will be diverted into the holding pond and released at a reduced rate into the existing drainage system.

The calculations are as follows:

1. Runoff from the undeveloped existing land.			
Runoff Coefficient	C =	0.2	
Rainfall Intensity	i =	3.20 IN./HR.	
Runoff Quantity	Q =	CIA	
Acres	A =	13.02 ACRES	
Q(out) = C*I*A =		8.34 CFS	

2. Runoff from developed land			
Runoff Coefficients			
Paved Area	135,807	C = 0.9	
Landscaped Area	334,282	C = 0.2	
Roof	97,276	C = 0.8	
Weighted Runoff Coefficient		C = 0.47	
Rainfall Intensity	i =	varies with time	
Runoff Quantity	Q =	CIA	

3. Detention Basin		
Volume in	Q * t	
Volume out	8.34 * t	

The capacity of the detention basin is calculated as the maximum difference between the volume flowing in and the volume flowing out.

The outflow from the detention basin is limited to outflow if undeveloped.
Use 8.34 cfs for Q outflow

The required volume of the detention basin is **20,288 cubic feet**

USE A **13.3 INCH DIAMETER ORIFICE AT OUTLET**

PUMP STATION SPECIFICATIONS

SCOPE
FURNISH AND INSTALL 2 SUBMERSIBLE KSB GRINDER PUMPS. EACH UNIT SHALL BE EQUIPPED WITH A 20.5 HP, SUBMERSIBLE ELECTRIC MOTOR FOR OPERATION ON 250 VOLTS, 3 PHASE 60 HERTZ SERVICE WITH 30 FEET OF CABLE. EACH PUMP SHALL HAVE A 2" DISCHARGE NOZZLE CONNECTED TO A 2" BY 3" BASE ELBOW AND BE CAPABLE OF DELIVERING 70 GPM AT 28.5 TDH. EACH UNIT SHALL BE FITTED WITH 20 FEET (20 FEET MINIMUM) OF LIFTING CHAIN OF ADEQUATE STRENGTH TO PERMIT RAISING AND LOWERING OF THE PUMP. FURNISH A STAINLESS STEEL GUIDE ROD SYSTEM WITH A TENSION DEVICE FOR DEEPER SUMPS.

DESIGN
EACH GRINDER SHALL BE CAPABLE OF PUMPING ALL MATERIAL IN DOMESTIC AND COMMERCIAL SEWAGE. THE DISCHARGE CONNECTION ELBOW SHALL BE PERMANENTLY INSTALLED IN THE WET WELL. THE GRINDER UNIT SHALL BE AUTOMATICALLY CONNECTED TO THE DISCHARGE CONNECTION ELBOW WHEN LOWERED INTO PLACE, AND SHALL BE EASILY REMOVED FOR INSPECTION OR SERVICE. THERE SHALL BE NO NEED FOR PERSONNEL TO ENTER THE WET WELL. SEATING OF THE GRINDER UNIT TO THE DISCHARGE CONNECTION ELBOW SHALL BE ACCOMPLISHED BY A SIMPLE DOWNWARD MOTION OF THE UNIT. A NITRILE RUBBER PROFILE GASKET SHALL BE MOUNTED SECURELY INSIDE THE DISCHARGE NOZZLE OF THE PUMP AND DISCHARGE ELBOW. NO PORTION OF THE GRINDER SHALL BEAR DIRECTLY ON THE FLOOR OF THE SUMP.

CONSTRUCTION
MAJOR PUMP COMPONENTS SHALL BE MADE OF CAST IRON, ASTM A 48, CLASS 40 B, WITH SMOOTH SURFACES DEVOID OF BLOW HOLES AND OTHER IRREGULARITIES. WHERE WATERTIGHT SEALING IS REQUIRED, O-RINGS MADE OF RUBBER SHALL BE USED. ALL EXPOSED SURFACES SHALL RECEIVE AN IRON-OXIDE PRIMER AND TWO TOP COATS OF CHLORINATED RUBBER FINISH.

CUTTERS
EACH GRINDER SHALL CONTAIN A STATIONARY AND A ROTATING CUTTER. FOR EXTENDED WARE EACH CUTTER SHALL CONSIST OF NORHARD A MARTENSITIC CHROMIUM-MOLYBDENUM ALLOY CAST IRON WITH A VICKERS HARDNESS RANGE OF 750 TO 1000.

MECHANICAL SEALS
EACH GRINDER PUMP SHALL BE FURNISHED WITH EITHER TWO TANDEM MECHANICAL ROTATING SHAFT SEALS OR ONE LOWER MECHANICAL ROTATING SHAFT SEAL AND ONE UPPER LIP SEAL. EACH SEAL SHALL OPERATE INDEPENDENTLY AND BE OIL LUBRICATED IN A SEPARATE CHAMBER. THE LOWER MECHANICAL SEAL SHALL CONTAIN ONE STATIONARY AND ONE ROTATING TUNGSTEN CARBIDE RING. WHEN USED, THE UPPER MECHANICAL SEAL SHALL CONTAIN ONE STATIONARY CHROME STEEL RING AND ONE ROTATING CARBON RING.

SHAFT
THE SHAFT SHALL CONSIST OF 420 STAINLESS STEEL, ASTM A 276, DESIGNED TO WITHSTAND WEAR FROM HIGHLY CORROSIVE PUMPED MEDIA. THE PUMP SHAFT SHALL ROTATE ON TWO PERMANENTLY LUBRICATED BEARINGS. EACH BEARING SHALL BE SINGLE ROW AND RATED FOR A 8-10 LIFE OF 40,000 HOURS.

IMPELLER
THE IMPELLER SHALL BE SEMI-OPEN AND CONSIST OF GRAY CAST IRON, ASTM A 48, CLASS 40 B, AND BE DYNAMICALLY BALANCED. THE IMPELLER SHALL BE CAPABLE OF PASSING ALL MATERIAL WHICH PASSES THROUGH THE CUTTERS.

MOTOR
THE MOTOR SHALL BE A SQUIRREL-CAGE, INDUCTION, SHELL TYPE DESIGN, HOUSED IN AN AIR-FILLED, WATERTIGHT CHAMBER. THE STATOR WINDING AND STATOR LEADS SHALL BE PROTECTED WITH MOISTURE RESISTANT CLASS F INSULATION TO WITHSTAND A TEMPERATURE OF 155 DEGREES (C/311 DEGREES F). THE MOTOR SHALL BE DESIGNED FOR CONTINUOUS DUTY, CAPABLE OF SUSTAINING UP TO THIRTY (30) STARTS PER HOUR.

PROTECTION
THE MOTOR SHALL BE FURNISHED WITH THE FOLLOWING MEANS OF PROTECTION. A BIMETALLIC SENSOR SHALL BE PROVIDED IN THE MOTOR WINDING TO AUTOMATICALLY SWITCH OFF THE MOTOR IF THE WINDING TEMPERATURE REACHES 285 DEGREES F. THE GRINDER WILL RESTART AUTOMATICALLY AFTER THE MOTOR COOLS DOWN. A MOISTURE SENSOR SHALL BE AVAILABLE IN THE STATOR CAVITY, WHICH WILL STOP THE GRINDER IF SUFFICIENT MOISTURE FORMED BY CONDENSATION TO AVOID FALSE SIGNALS TO THE MOISTURE SENSOR.

CABLE ENTRY
THE CABLE SHALL BE INSULATED BY A RUBBER BOOT INSERTED INTO THE LOWER PORTION OF THE PUMP TOP. THE RUBBER BOOT SHALL MATE TO A GASKET AND BE SEALED BY A TRUST-RING HELD TIGHTLY IN PLACE BY A PRESSURE SCREW. THE CABLE SHALL ENTER THE PUMP FROM THE SIDE OF THE MOTOR HOUSING FOR ADDITIONAL PROTECTION AND BETTER SUBMERGENCE OF THE CABLE GLAND.

WARRANTY
THE PUMP MANUFACTURE SHALL WARRANT THE UNITS TO THE OWNER IN WRITING (PRINTED FORM) AGAINST DEFECTS IN WORKMANSHIP AND MATERIAL FOR A PERIOD OF 1 (ONE) YEAR NOT TO EXCEED 18 MONTHS FROM THE DATE OF SHIPMENT.

CONSTRUCTION

Site Plan

Profile

WET WELL DESIGN

WET WELL VOLUME TO ALARM
T(3)(9) = 1,900 GALLONS PUMP CHAMBER
RESERVE TANK = 8,314 GALLONS
TOTAL WET WELL VOLUME
T(3)(14.00) = 2,961 + 8,134 = 11,095 GALLONS

CYCLING RATE OF PUMPS APPROXIMATELY 10 MINUTES
DUPLIX PUMPING SYSTEM IS CAPABLE OF PUMPING
1,240 GPM WITH BOTH PUMPS OPERATING.

WET WELL SIZING TO AVOID HEAT BUILD UP IN THE
PUMPS (FREQUENT STARTING AND SEPTIC CONDITIONS
DUE TO EXCESSIVE DETENTION TIME.

WET WELL AND RESERVE STORAGE CAPACITY WILL
PROVIDE OVER 6 HOURS OF CAPACITY.

Power One-Line Diagram

General Notes:

- 1) REFER TO SITE PLAN FOR EQUIPMENT LOCATION.
- 2) THE POWER FEED AND GENERATOR ARE SIZED FOR MAXIMUM OF TOW PUMPS RUNNING AT ONE TIME.
- 3) THE ELECTRICAL CONTRACTOR SHALL NOTIFY AND COOPERATE WITH THE MECHANICAL CONTRACTOR SUCH THAT NO PIPING, OR EQUIPMENT FOREIGN TO THE OPERATION OF THE ELECTRICAL EQUIPMENT SHALL BE PERMITTED TO BE INSTALLED IN, ENTER OR PASS THROUGH ELECTRICAL ROOMS OR SPACES; OR ABOVE OR BELOW ELECTRICAL EQUIPMENT IN THE OTHER AREAS.

Key Notes:

- ① CONTRACTOR SHALL PROVIDE AND INSTALL CONDUIT IN ACCORDANCE WITH PACIFICORP POWER REQUIREMENTS. CONDUCTORS SHALL BE INSTALLED BY PACIFICORP.
- ② PROVIDED AND INSTALLED BY PACIFICORP.
- ③ PROVIDED AND INSTALLED BY DEVELOPER.
- ④ CONDUIT AND CONDUCTORS TO MIN POWER ZONE SHALL NOT EXCEED 10 FEET.
- ⑤ 1" CONDUIT FOR BLOCK HEATER WITH TWO #8 AND ONE #10 GROUND CONDUCTORS CONNECT TO A 40 AMP, 2-POLE CIRCUIT BREAKER IN MINI-POWER CENTER.
- ⑥ TWO CIRCUITS IN ONE 1" CONDUIT FOR BATTERY CHARGER AND BATTERY BLANKET, CONNECT TO 20 AMP, SINGLE POLE CIRCUIT BREAKER IN MINI-POWER CENTER.
- ⑦ HAZARDOUS LOCATION JUNCTION BOX AND CONDUIT SEAL.
- ⑧ SINGLE PHASE TRANSFORMER, COPPER WINDINGS IN A NEMA 3R PAD LOCKABLE ENCLOSURE, EATON MINI-POWER CENTER OR EQUAL.
- ⑨ MANUFACTURER'S CABLE.
- ⑩ PROVIDE AND INSTALL AN INTRINSICALLY SAFE BARRIER FOR EACH LEVEL SWITCH. THE LEVEL SWITCHES SHALL BE MADE FOR LOW ENERGY CIRCUITS TO BE USED IN HAZARDOUS LOCATION, ANCHOR SCIENTIFIC TYPE GSI - GOLD OR EQUAL.

Number:	5917-15

Notes:

- Describe all BMP's to protect storm water inlets:
All storm water inlets to be protected by straw wattle barriers, or gravel bags (see detail).
- Describe BMP's to eliminate/reduce contamination of storm water from:
 - Equipment / building / concrete wash areas:
To be performed in designated areas only and surrounded with silt fence barriers.
 - Soil contaminated by soil amendments:
If any contaminants are found or generated, contact environmental engineer and contacts listed.
 - Areas of contaminated soil:
If any contaminants are found or generated, contact environmental engineer and contacts listed.
 - Fueling area:
To be performed in designated areas only and surrounded with silt fence.
 - Vehicle maintenance areas:
To be performed in designated areas only and surrounded with silt fence.
 - Vehicle parking areas:
To be performed in designated areas only and surrounded with silt fence.
 - Equipment storage areas:
To be performed in designated areas only and surrounded with silt fence.
 - Materials storage areas:
To be performed in designated areas only and surrounded with silt fence.
 - Waste containment areas:
To be performed in designated areas only and surrounded with silt fence.
 - Service areas:
To be performed in designated areas only and surrounded with silt fence.
- BMP's for wind erosion:
Stockpiles and site as needed to be watered regularly to eliminate / control wind erosion
- Construction Vehicles and Equipment:
 - Maintenance
 - Maintain all construction equipment to prevent oil or other fluid leaks.
 - Keep vehicles and equipment clean, prevent excessive build-up of oil and grease.
 - Regularly inspect on-site vehicles and equipment for leaks, and repair immediately.
 - Check incoming vehicles and equipment (including delivery trucks, and employee and subcontractor vehicles) for leaking oil and fluids. Do not allow leaking vehicles or equipment on-site.
 - Segregate and recycle wastes, such as greases, used oil or oil filters, antifreeze, cleaning solutions, automotive batteries, hydraulic, and transmission fluids.
 - Fueling
 - If fueling must occur on-site, use designated areas away from drainage.
 - Locate on-site fuel storage tanks within a bermed area designed to hold the tank volume.
 - Cover retention area with an impervious material and install in a manner to ensure that any spills will be contained in the retention area. To catch spills or leaks when removing or changing fluids.
 - Use drip pans for any oil or fluid changes.
 - Washing
 - Use as little water as possible to avoid installing erosion and sediment controls for the wash area.
 - If washing must occur on-site, use designated, bermed wash areas to prevent waste water discharge into storm water, creeks, rivers, and other water bodies.
 - Use phosphate-free, biodegradable soaps.
 - Do not permit steam cleaning on-site.
- Spill Prevention and Control
 - Minor Spills:
Minor spills are those which are likely to be controlled by on-site personnel. After contacting local emergency response agencies, the following actions should occur upon discovery of a minor spill:
 - Contain the spread of the spill.
 - If the spill occurs on paved or impermeable surfaces, clean up using "dry" methods (i.e. absorbent materials, cat litter, and / or rags).
 - If the spill occurs in dirt areas, immediately contain the spill by constructing an earth dike. Dig up property dispose of contaminated soil.
 - If the spill occurs during rain, cover the impacted area to avoid runoff.
 - Record all steps taken to report and contain spill.
 - Major Spills:
On-site personnel should not attempt to control major spills until the appropriate and qualified emergency response staff have arrived at the site. For spills of federal reportable quantities, also notify the National Response Center at (800) 424-8802. A written report should be sent to all notified authorities. Failure to report major spills can result in significant fines and penalties.
- Post Roadway / Utility Construction
 - Maintain good housekeeping practices.
 - Enclose or cover building material storage areas.
 - Properly store materials such as paints and solvents.
 - Store dry and wet materials under cover, away from drainage areas.
 - Avoid mixing excess amounts of fresh concrete or cement on-site.
 - Perform washout of concrete trucks offsite or in designated areas only.
 - Do not wash out concrete trucks into storm drains, open ditches, streets or streams.
 - Do not place material or debris into streams, gutters or catch basins that stop or reduce the flow of runoff water.
 - All public streets and storm drain facilities shall be maintained free of building materials, mud and debris caused by grading or construction operations. Roads will be swept within 1000' of construction entrance daily, if necessary.
 - Install straw wattle around all inlets contained within the development and all others that receive runoff from the development.
- Erosion Control Plan Notes
 - The contractor will designate an emergency contact that can be reached 24 hours a day 7 days a week.
 - A stand-by crew for emergency work shall be available at all times during potential rain or snow runoff events. Necessary materials shall be available on site and stockpiled at convenient locations to facilitate rapid construction of emergency devices when rain or runoff is eminent.
 - Erosion control devices shown on the plans and approved for the project may not be removed without approval of the engineer of record. If devices are removed, no work may continue that have the potential of erosion without consulting the engineer of record. If deemed necessary erosion control should be reestablished before this work begins.
 - Graded areas adjacent to fill slopes located at the site perimeter must drain away from the top of the slope at the conclusion of each working day. This should be confirmed by survey or other means acceptable to the engineer of record.
 - All silt and debris shall be removed from all devices within 24 hours after each rain or runoff event. Except as otherwise approved by the inspector, all removable protective devices shown shall be in place at the end of each working day and through weekends until removal of the system is approved.
 - All loose soil and debris, which may create a potential hazard to offsite property, shall be removed from the site as directed by the Engineer of record of the governing agency.
 - The placement of additional devices to reduce erosion damage within the site is left to the discretion of the Engineer of record.
 - Desilting basins may not be removed or made inoperable without the approval of the engineer of record and the governing agency.
 - Erosion control devices will be modified as need as the project progresses, and plans of these changes submitted for approval by the engineer of record and the governing agency.
- Conduct a minimum of one inspection of the erosion and sediment controls every two weeks. Maintain documentation on site.
 - Part III.D.4 of general permit UTR300000 identifies the minimum inspection requirements.
 - Part III.D.4.C identifies the minimum inspection report requirements.
 - Failure to complete and/or document storm water inspections is a violation of part III.D.4 of Utah General Permit UTR 300000.

Perspective View

Section

INSTALLATION

The silt fence should be installed prior to major soil disturbances in the drainage area. The fence should be placed across the slope along a line of uniform elevation wherever flow of sediment is anticipated. Table 1 shows generally-recommended maximum slope lengths (slope spacing between fences) at various site grades for most silt fence applications.

TABLE 1: Recommended Maximum Slope Lengths for Silt Fence (Richardson & Middlebrooks, 1991)	
Slope Steepness (%)	Max. Slope Length m (ft)
<2%	30.5m (100ft)
2-5%	22.9m (75ft)
5-10%	15.2m (50ft)
10-20%	7.6m (25ft)
>20%	4.5m (15ft)

PREFABRICATED SILT FENCE ROLLS

- Excavate a minimum 15.2cm x 15.2cm (6"x6") trench at the desired location.
- Unroll the silt fence, positioning the post against the downstream wall of the trench.
- Adjacent rolls of silt fence should be joined by nesting the end post of one fence into the other. Before nesting the end posts, rotate each post until the geotextile is wrapped completely around the post, then abut the end posts to create a tight seal as shown in Figure 1.
- Drive posts into the ground until the required fence height and/or anchorage depth is obtained.
- Bury the loose geotextile at the bottom of the fence in the upstream trench and backfill with natural soil, tamping the backfill to provide good compaction and anchorage. Figure 2 illustrates a typical silt fence installation and anchor trench placement.

should generally be less than three (3) times the height of the fence.

- If a steel or plastic mesh is required to reinforce the geotextile, it shall have a minimum mesh opening of 15.2cm (6").
- Fasten the mesh to the upslope side of the posts using heavy duty wire staples, tie wires or hog strings. Extend the mesh into the bottom of the trench.
- The geotextile shall then be stapled or wired to the posts. An extra 20-50cm (8-20") of geotextile shall extend into the trench.

INSPECTION

- Inspect the silt fence daily during periods of rainfall, immediately after significant rainfall event and weekly during periods of no rainfall. Make any repairs immediately.
- When sediment deposits behind the silt fence are one-third of the fence height, remove and properly dispose of the silt accumulations. Avoid damage to the fabric during cleanout.

REMOVAL

- Silt fence should not be removed until construction ceases and the upslope area has been properly stabilized and/or revegetated.
