

Mini SWPPP for Chris Hansen's Accessory Building

1. Area of disturbance is approximately 20,800 sf
2. Dave Hansen is the responsible person 458-0518
3. There is a large vegetative buffer to protect the adjacent property below. If that fails, a silt fence will be installed along the property line.
4. All excavated material will be stock piled on site then used to backfill and grade around the building.
5. There will not be a concrete washout area located on site.
6. There will not be port-a-johns located on site.
7. The construction access is shown on the plan and will be built with road base or gravel.
8. If tracking occurs, the asphalt will be scraped and swept clean.
9. There is a drainage swale where with temporary construction access is located and will be protected during construction.
10. Currently the rain and storm water soaks into the ground and runs northwesterly down the hill. What ever doesn't soak into the ground runs down the edge of 1100 South Street as it has done since the original subdivision was built in the early 70's.
