

Building Elevations and Details

There will be no typical building structures built. Instead, light green/ neutral telephone poles ranging from 12-43 ft. will be placed in the ground with different materials built off of the poles or from pole to pole to complete the high course activities. These materials may include white rope, naturally stained wood, metal cables, or dark blue and red colored webbing. Low course activities will include naturally stained wooden platforms no larger than 12x12 placed on the ground and small stumps ranging from 1-6 feet out of the ground. There will also be cables and ropes strung low to the ground in distances no longer than 18 feet to complete these activities. Again, all construction is engineered, built, and inspected according to ACCT (the leading company in ropes course safety and inspections) standards.
