There should probably be a note that the lots on the downhill side of the road will accept the water off the roadway unless the design changes to have swales on both sides of the road.

Where does the PUE change to just a 20' sewer easement?

Is there some road slope that should have an easement along here?

Is it possible to show the dimensions so we can locate the easements without having to redraw the recorded written easement?

Should there be a no access line for these lots with double frontage?
