I. Introduction and Summary

The proposed Resort Cove development is located along the east side of Wolf Creek Drive south of Elkhorn Drive in Wolf Creek, Utah. The site is planning to includes a 236 multifamily units, 61,315 sf of Retail and a 65 room hotel. The site is projected to generate 198 AM and 405 PM peak hour trips with 4,586 daily trips. The site is planning to access Wolf Creek Drive via 3 full motion accesses.

The intersection of Elkhorn Drive / Wolf Creek Drive operates with critical side street delay of LOS B in the AM and PM Saturday peak period. With the addition of site traffic in 2020 and 2025 the side street delay is maintained at LOS B. Access 1 / Wolf Creek Drive operates with critical side street delay of LOS B in the AM and PM Saturday peak period in 2020. By 2025 the access operates with critical side street delay of LOS B in the AM and LOS C in the PM Saturday peak period. Access 2 / Wolf Creek Drive is an existing access on the west side of the roadway that operates with critical side street delay of LOS B or better in the AM and PM Saturday peak period. With the addition of the site in 2020 and 2025, the access operates with critical side street delay of LOS B in the AM and LOS C in the PM Saturday peak period. Access 3 / Wolf Creek Drive is an existing access on the west side of the roadway that operates with critical side street delay of LOS B or better in the AM and PM Saturday peak period. With the addition of the site in 2020 and 2025, this LOS is maintained. West Side North Access / Wolf Creek Drive is an existing access on the west side of the roadway that operates with critical side street delay of LOS B or better in the AM and PM Saturday peak period. With the addition of site traffic in 2020 and 2025, this LOS is maintained.

Recommendations:

Per UDOT standards, Access 2 requires a NBR deceleration lane and a SBL deceleration lane. The projected queue for these movements is less than 1 vehicle (25 feet) and therefore if turn lanes are built, a storage pocket of 50 feet plus taper is necessary.

II. Proposed Project

The proposed site is located along the east side of Wolf Creek Drive south of Elkhorn Drive in Wolf Creek, Utah. The Resort Cove development is planning to includes a 236 multifamily homes, 61,315 sf of Retail and a 65 room hotel. The site is projected to generate 198 AM and 405 PM peak hour trips with 4,586 daily trips. The site is planning to access Wolf Creek Drive via 3 full motion accesses. Access 1 is located 270 feet south of Access 2 with no access within 150 feet to the south, Access 2 is located 270 feet south of Access 3, Access 3 is located 170 feet south of the next access to the north. Figure 1 shows the conceptual site plan and access locations and spacing.

Conceptual Site Plan

III. Study Area Conditions

The study area includes the following intersection.

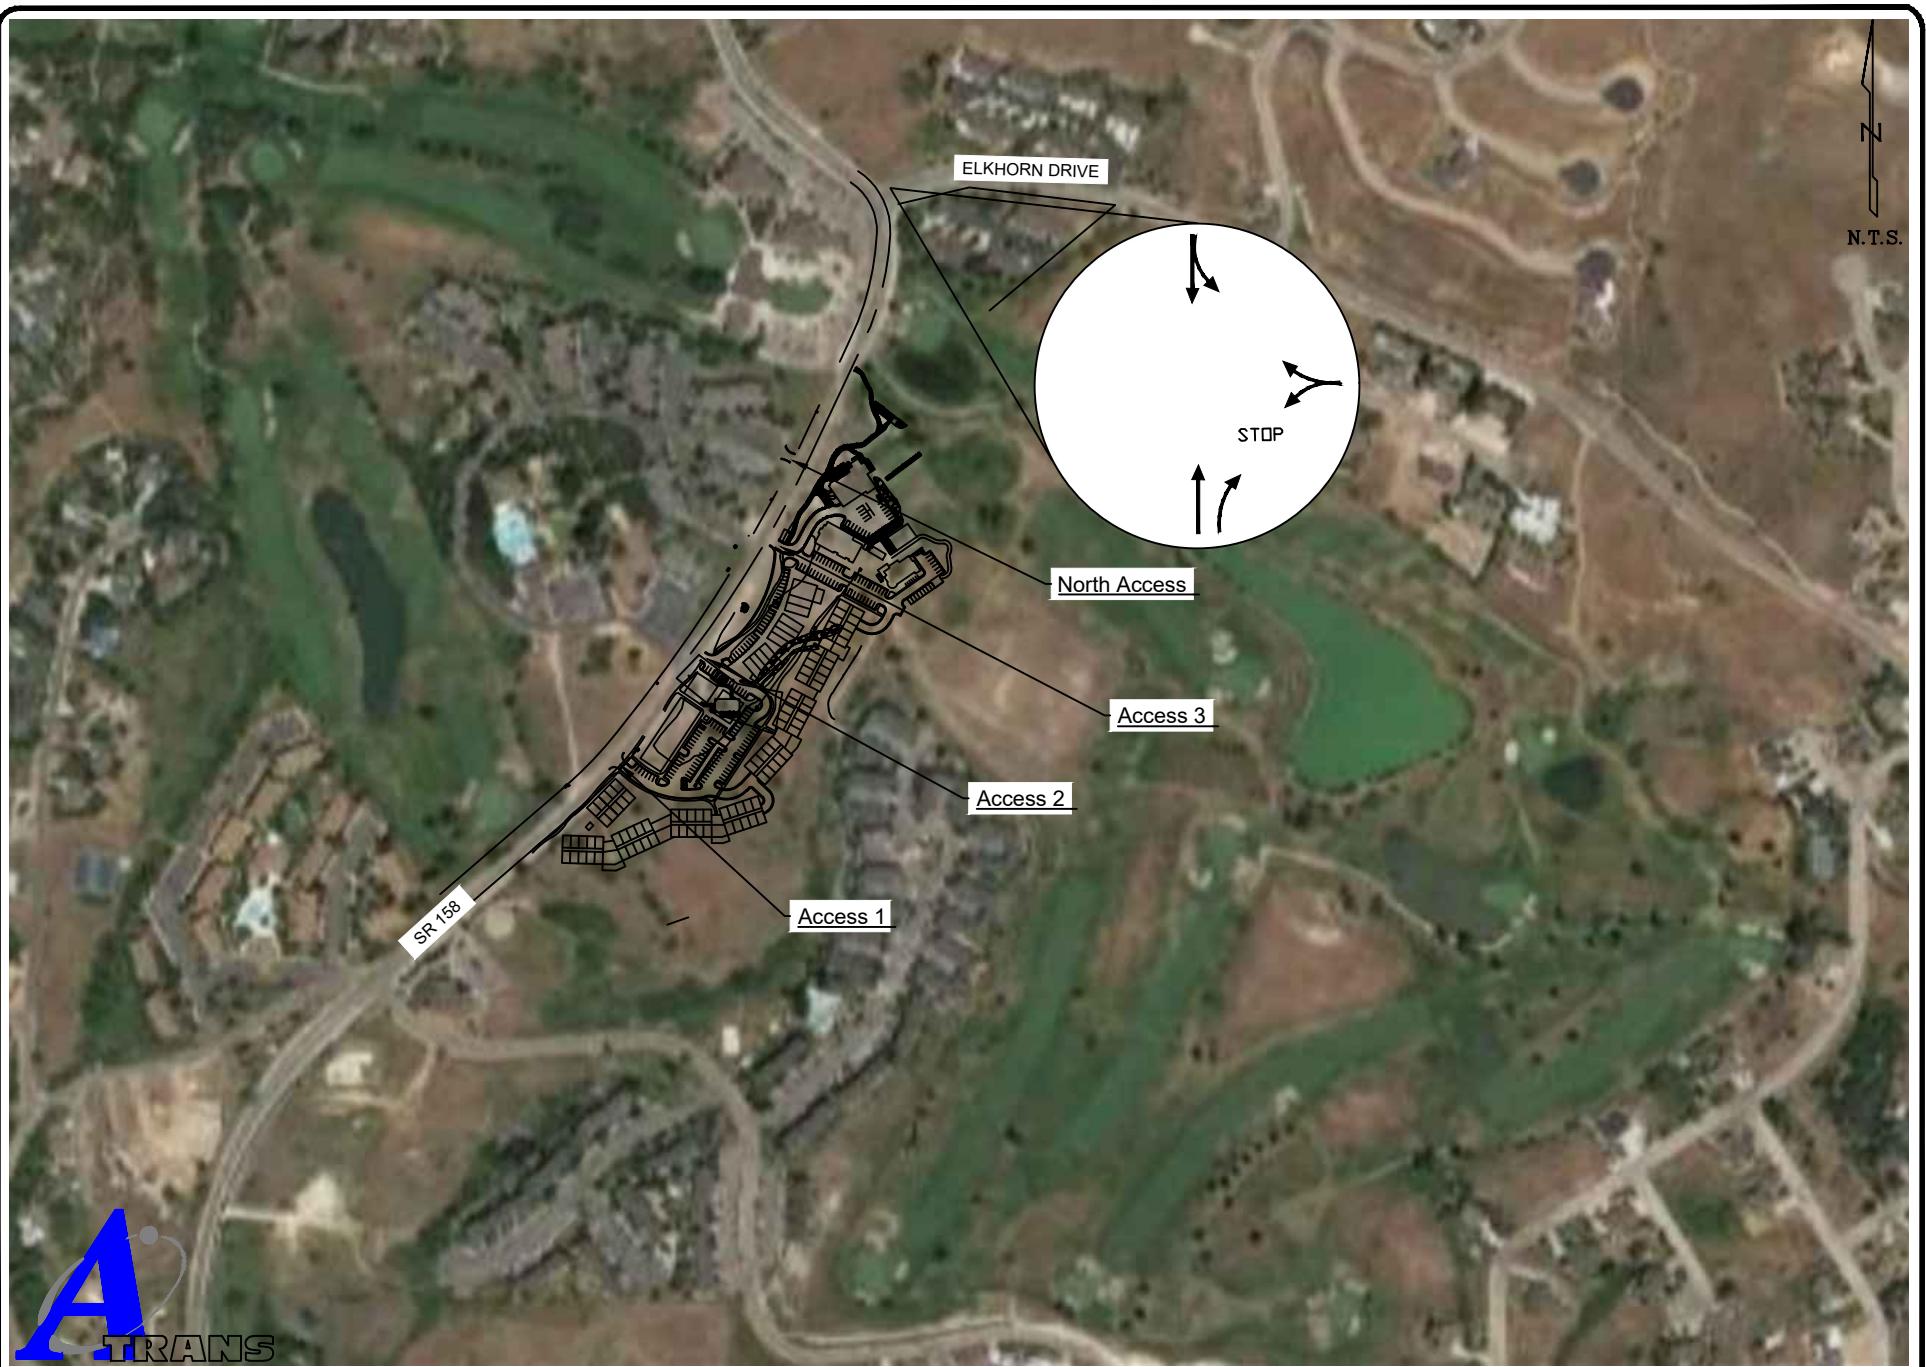

- Wolf Creek Drive / Elkhorn Drive
- Wolf Creek Drive / Access 1
- Wolf Creek Drive / Access 2
- Wolf Creek Drive / Access 3
- Wolf Creek Drive / North Access on West side of Wolf Creek Drive
-

Figure 2 shows the location of the site. Figure 3 shows existing intersection geometry.

Wolf Creek Drive

Wolf Creek Drive or SR 158 is currently a two lane facility with one lane in each direction. The 2017 AADT is 3,400 vehicles per day with a posted speed limit is 40 MPH. Wolf Creek Drive is categorized by UDOT as a Category 7 roadway.

Figure 3

Existing Geometry

IV. Analysis of Existing Condition

The existing traffic counts were performed Saturday February 15, 2020 during the AM and PM Saturday peak periods of Presidents Day Weekend. Figure 4 shows existing traffic counts utilized in the study.

The 2010 Highway Capacity Manual defines the Level of Service (LOS) for both signalized and unsignalized intersections as a range of average experienced delay. LOS is a qualitative rating of traveler satisfaction from A to F whereby LOS A is good and LOS F poor. Table 1 shows the LOS range by delay for unsignalized and signalized intersections and accesses.

Table 1: Intersection LOS-Delay Relationship

	Unsignalized	Signalized
Level of Service	Total Delay per Vehicle (sec)	Total Delay per Vehicle (sec)
A	≤ 10.0	≤ 10.0
B	> 10.0 and ≤ 15.0	> 10.0 and ≤ 20.0
C	> 15.0 and ≤ 25.0	> 20.0 and ≤ 35.0
D	> 25.0 and ≤ 35.0	> 35.0 and ≤ 55.0
E	> 35.0 and ≤ 50.0	> 55.0 and ≤ 80.0
F	> 50.0	> 80.0

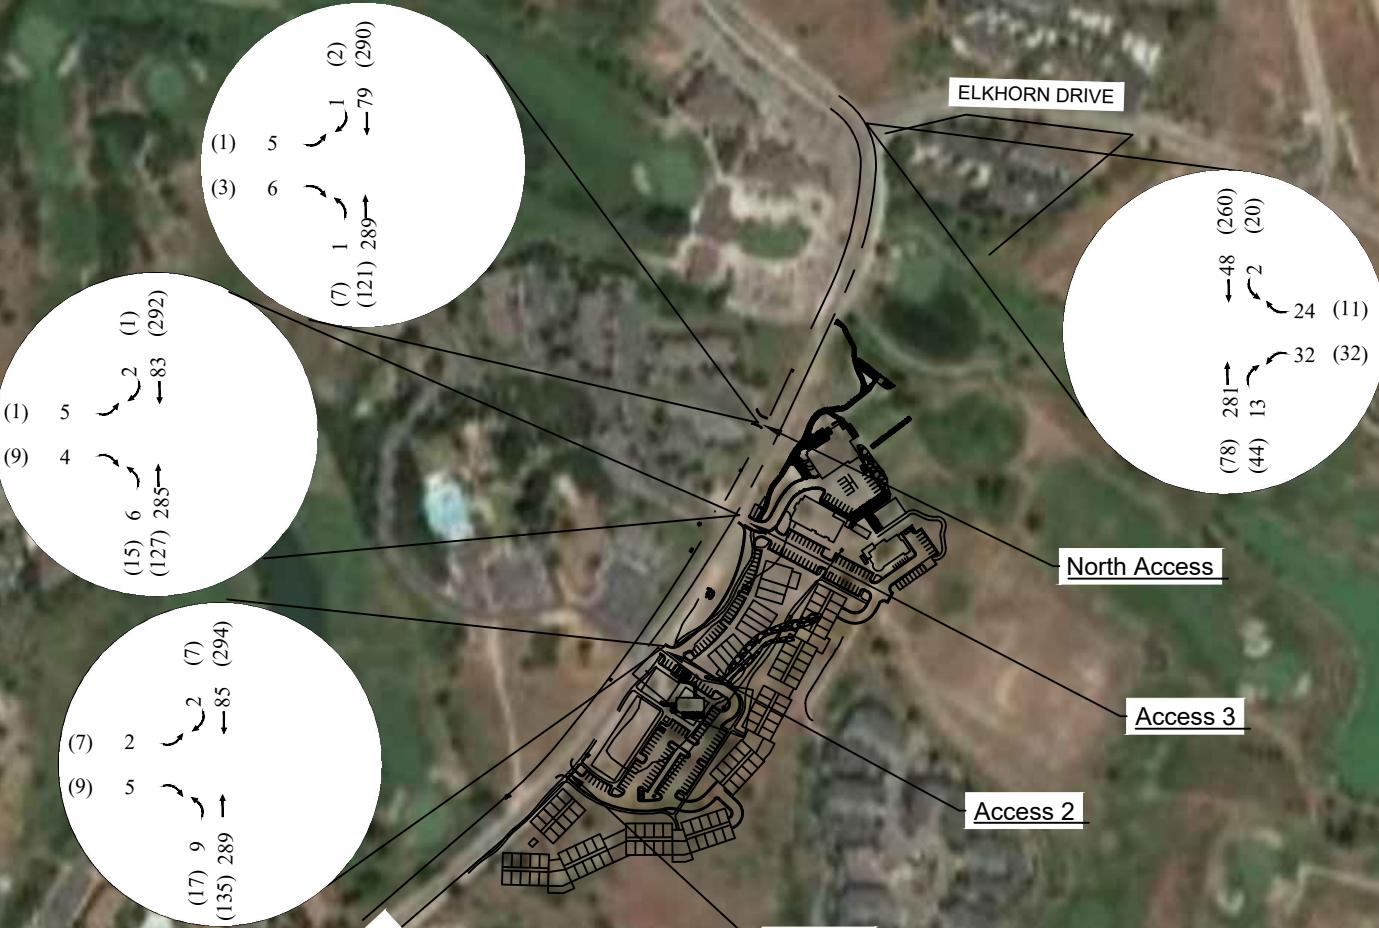

The intersection of Elkhorn Drive / Wolf Creek Drive operates with critical side street delay at LOS B in the AM and PM peak period. Table 2 shows the Existing LOS.

Table 2: Existing Level of Service

Existing Traffic

V. Projected Traffic

A. Trip Generation

Trip generation for the site was done using The Institute of Transportation Engineers (ITE) *Trip Generation* (10th Edition) handbook. The site is planning to include a 236 multifamily homes, 61,315 sf of Retail and a 65 room hotel. The site is projected to generate 198 AM and 405 PM peak hour trips with 4,586 daily trips. The trip generation for the site is shown in Table 3.

Table 3: Trip Generation for Site

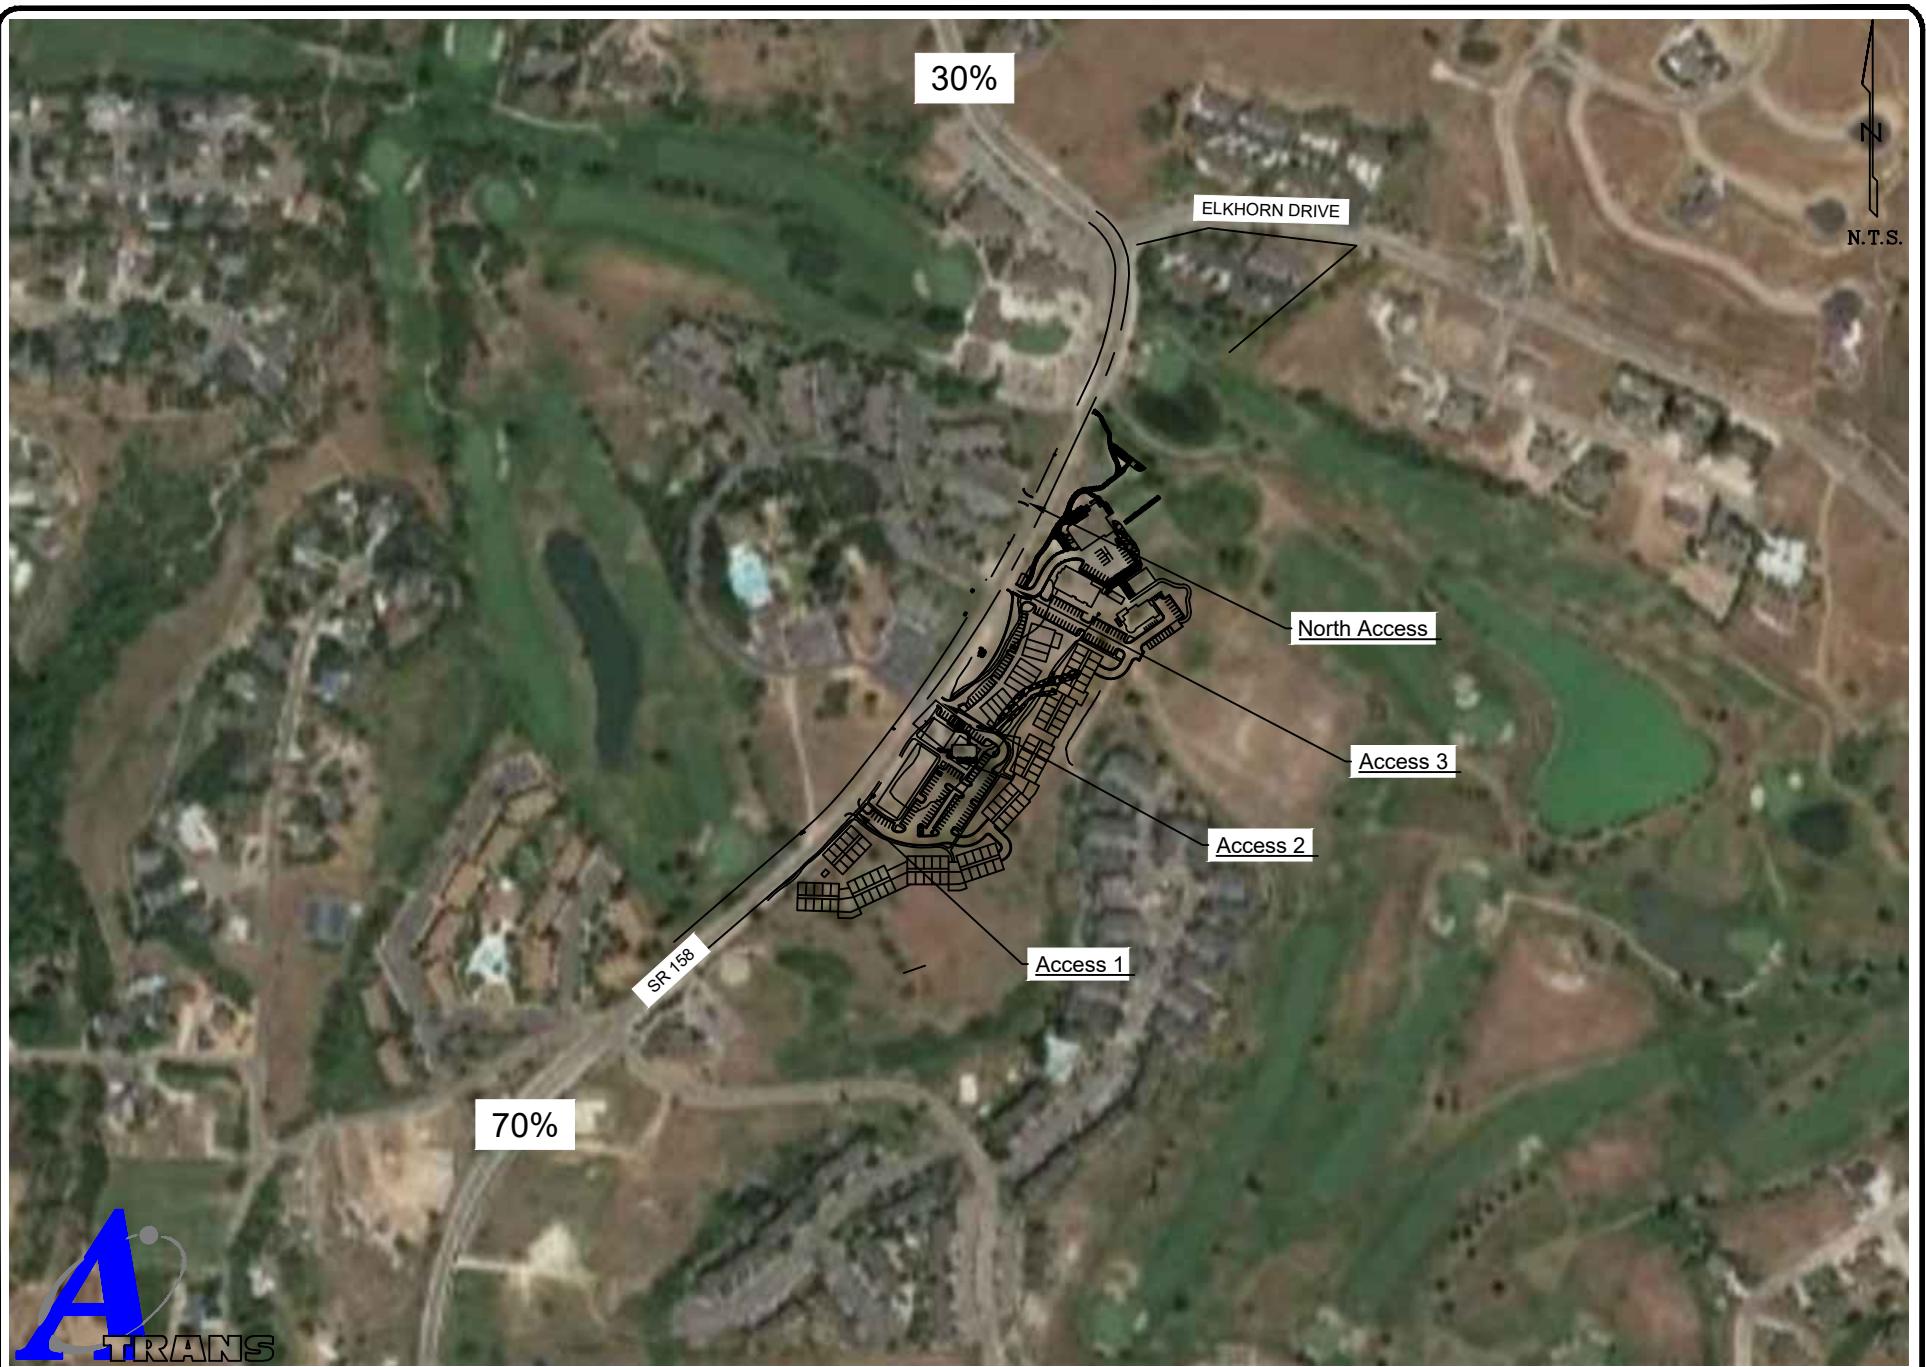

Land Use	Size	Trip Rate	Trips	% IN	% Out	Trips In	Trips Out
AM							
Multifamily	236	0.5	109	23%	77%	25	84
Retail	61,315	0.94	58	62%	38%	36	22
Hotel	65	0.47	31	59%	41%	18	13
Total			198			79	119
PM							
Multifamily	236	0.56	132	63%	37%	83	49
Retail	61,315	3.81	234	48%	52%	112	122
Hotel	65	0.6	39	51%	49%	20	19
Total			405			215	190
Daily							
Multifamily	236	7.32	1728				
Retail	61,315	37.75	2315				
Hotel	65	8.36	543				
Total			4586				

B. Trip Distribution

Project site traffic was applied to the origin-destination (O-D) for the site. Origin-destination was determined from evaluating the existing traffic patterns and hourly traffic volumes on each leg of the included intersections as well as the location of retail centers and freeways relative to this site. This was used as a baseline for origin destination and engineering judgment was applied to this to determine the following OD for the site.

- 30% to/from north on Wolf Creek Drive
- 70% to/from south on Wolf Creek Drive

Origin Destination is shown in Figure 5. Site trip distribution is shown in Figure 6.

A-TRANS TRANSPORTATION ENGINEERING

Figure 6

Site Generated Traffic

VI. Growth

Growth in the area was determined from UDOT's Traffic on Utah Highways. The volumes and projections utilized to determine growth in the area is shown in Table 4. Based on this information an average growth of 3.25% was found. The growth factor for 2025 is 1.17.

Table 4: Growth Projections

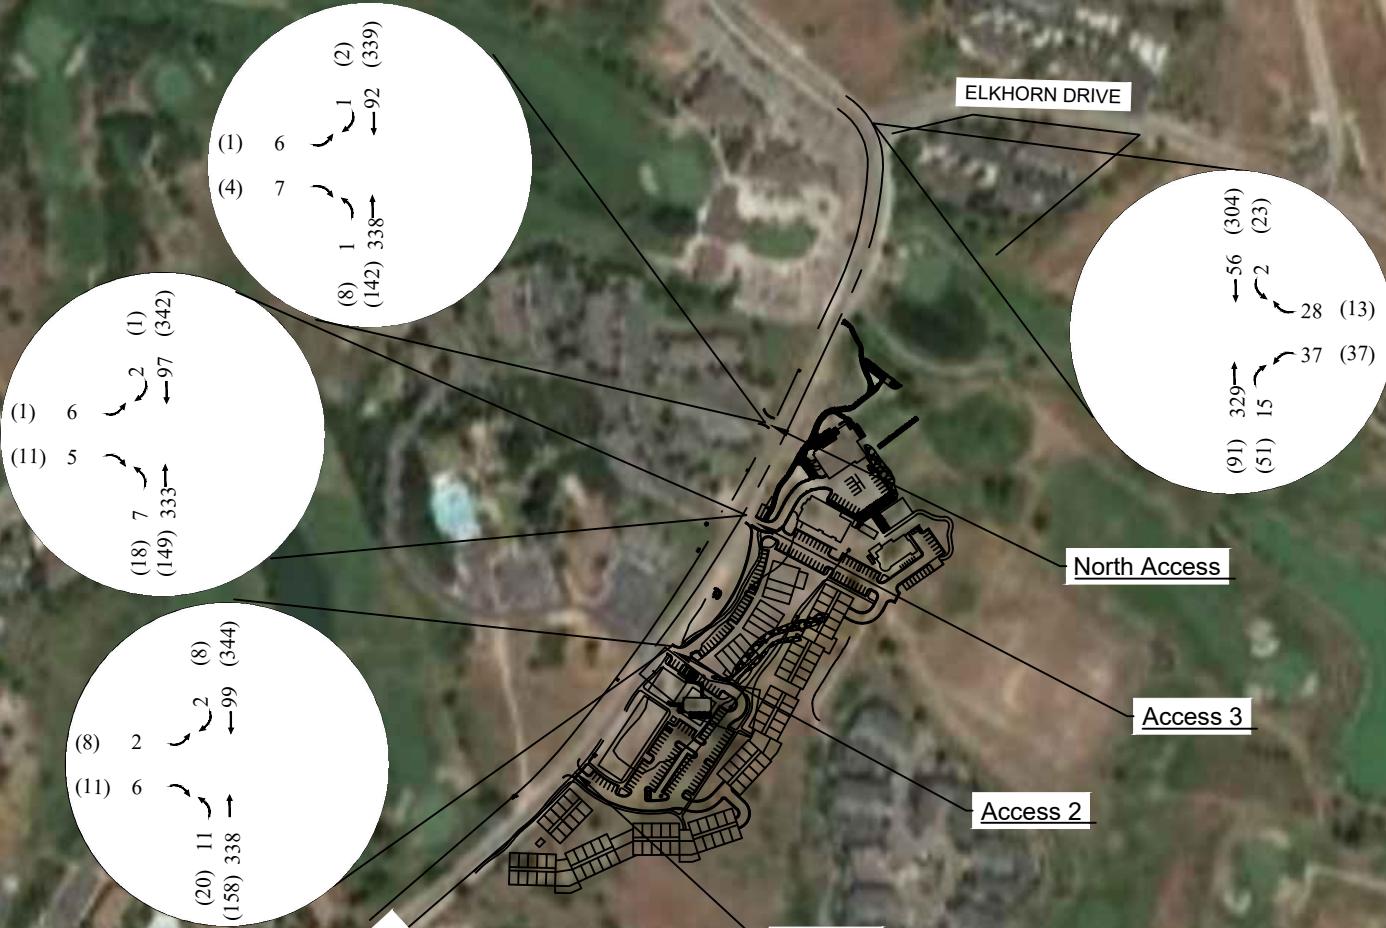

4800 South		
Year	AADT	Growth
2012	2,900	
2013	3,000	3%
2014	3,000	0%
2015	3,200	7%
2016	3,300	3%
2017	3,400	3%
	Average	3.25%

Background traffic is determined by multiplying the existing traffic by the growth factor for 2025. 2025 Background Traffic is shown in Figure 7. Total traffic in the area for the future projection years is derived by adding the non-site volume forecasts to the site trip distribution. 2020 Total Traffic is shown in Figure 8 and 2025 Total Traffic is shown in Figure 9.

VII. Traffic Analysis

A. Level of Service Analysis

The intersection and access analysis evaluates the performance of each intersection and access using the measure of performance of delay and level of service (LOS). Tables 5-9 show the intersection and access analysis.

Analysis Results

- The intersection of Elkhorn Drive / Wolf Creek Drive operates with critical side street delay of LOS B in the AM and PM Saturday peak period. With the addition of site traffic in 2020 and 2025 the side street delay is maintained at LOS B.
- Access 1 / Wolf Creek Drive operates with critical side street delay of LOS B in the AM and PM Saturday peak period in 2020. By 2025 the access operates with critical side street delay of LOS B in the AM and LOS C in the PM Saturday peak period
- Access 2 / Wolf Creek Drive is an existing access on the west side of the roadway that operates with critical side street delay of LOS B or better in the AM and PM Saturday peak period. With the addition of the site in 2020 and 2025, the access operates with critical side street delay of LOS B in the AM and LOS C in the PM Saturday peak period
- Access 3 / Wolf Creek Drive is an existing access on the west side of the roadway that operates with critical side street delay of LOS B or better in the AM and PM Saturday peak period. With the addition of the site in 2020 and 2025, this LOS is maintained.
- West Side North Access / Wolf Creek Drive is an existing access on the west side of the roadway that operates with critical side street delay of LOS B or better in the AM and PM Saturday peak period. With the addition of site traffic in 2020 and 2025, this LOS is maintained.

B. Queue Analysis

Based on the projected traffic, queue storage length requirements can be determined. To determine if sufficient storage space exists to accommodate the projected demand, the intersection and accesses included in this traffic study are analyzed for queue storage capacity. The queue lengths are provided by the HCM analysis and are done through Synchro. Once the storage length is determined, this can typically be compared to the available storage length within the provided turn pockets or between intersections. The only existing turn pocket is the NBR at Wolf Creek Drive / Elkhorn Drive and is approximately 150 feet, the projected 2025 queue is less than 1 vehicle (25 feet). The projected queue for all accesses is less than 1 vehicle and therefore if turn lanes are required a storage pocket of 50 feet plus taper is required.

C. Access and Roadway Category

According to the UDOT, SR 158 is categorized as a Category 7 roadway. As per UDOT Administrative Rule R930-6, signal spacing is required at 1,320 feet, street spacing is required at 300 feet and access spacing is required at 150 feet or by variance. The distance between access points/intersections is measured from end of radius to end of adjacent radius. Access 1 is located 270 feet south of Access 2 with no access within 150 feet to the south, Access 2 is located 270 feet south of Access 3, Access 3 is located 170 feet south of the next access to the north. All site accesses meet the required access spacing.

According to UDOT Administrative Rule R930-6 a Category 7 roadway requires:

1. A left turn lane with storage length plus taper is required for any access with a projected peak hour left ingress turning volume greater than 25 vehicles per hour. If the posted speed is greater than 40 mph, a deceleration lane and taper is required for any access with a projected peak hour left ingress turning volume greater than 10 vehicles per hour. The taper length must be included in the deceleration length.
2. A right turn lane with storage length plus taper is required for any access with a projected peak hour right ingress turning volume greater than 50 vehicles per hour. If the posted speed is greater than 40 mph, a right turn deceleration lane and taper is required for any access with a projected peak hour right ingress turning volume greater than 25 vehicles per hour. The taper length must be included in the deceleration length.

Access 2 requires a NBR deceleration lane and a SBL deceleration lane.

D. Safety Discussion

UDOT provides a Safety Index or safety ratings in a statewide safety comparison of major roadways. This takes into account the different traffic patterns and volumes experienced in urban and rural areas. The Safety Index is a combination of four equally weighted safety analysis sub-scores: Crash Rate Score, Severe Crash Rate Score, Crashes per Mile Score and Severe Crashes per Mile Score. The Safety Index is reported on a 0 to 10 scale with 10 representing the worst condition.

This segment of Wolf Creek Drive has a Safety Index of 4 out of 10 with a crash rate 110% of the average and a severe crash rate 80% of the average.

VIII. Conclusions

Resort Cove is planned as a mixed use development located along the east side of Wolf Creek Drive south of Elkhorn Drive in Wolf Creek, Utah. The site is planning to include a 236 multifamily homes, 61,315 sf of Retail and a 65 room hotel. The site is projected to generate 198 AM and 405 PM peak hour trips with 4,586 daily trips. The site is planning to access Wolf Creek Drive via 3 full motion accesses.

The following comments are made about the site:

- The intersection of Elkhorn Drive / Wolf Creek Drive operates with critical side street delay of LOS B in the AM and PM Saturday peak period. With the addition of site traffic in 2020 and 2025 the side street delay is maintained at LOS B.
- Access 1 / Wolf Creek Drive operates with critical side street delay of LOS B in the AM and PM Saturday peak period in 2020. By 2025 the access operates with critical side street delay of LOS B in the AM and LOS C in the PM Saturday peak period
- Access 2 / Wolf Creek Drive is an existing access on the west side of the roadway that operates with critical side street delay of LOS B or better in the AM and PM Saturday peak period. With the addition of the site in 2020 and 2025, the access operates with critical side street delay of LOS B in the AM and LOS C in the PM Saturday peak period
- Access 3 / Wolf Creek Drive is an existing access on the west side of the roadway that operates with critical side street delay of LOS B or better in the AM and PM Saturday peak period. With the addition of the site in 2020 and 2025, this LOS is maintained.
- West Side North Access / Wolf Creek Drive is an existing access on the west side of the roadway that operates with critical side street delay of LOS B or better in the AM and PM Saturday peak period. With the addition of site traffic in 2020 and 2025, this LOS is maintained.
- Access 1 is located 270 feet south of Access 2 with no access within 150 feet to the south, Access 2 is located 270 feet south of Access 3, Access 3 is located 170 feet south of the next access to the north. All site accesses meet the required access spacing.
- Access 2 requires a NBR deceleration lane and a SBL deceleration lane.
- This segment of Wolf Creek Drive has a Safety Index of 4 out of 10 with a crash rate 110% of the average and a severe crash rate 80% of the average.

IX. Recommendations

Per UDOT standards, Access 2 requires a NBR deceleration lane and a SBL deceleration lane. The projected queue for these movements is less than 1 vehicle (25 feet) and therefore if turn lanes are built, a storage pocket of 50 feet plus taper is necessary.
