Response: In home sprinkler demand, experience, and vendor recommendation.

3. Sheet 1.01 - Why did the sewer service size change from standard to 6"? Seems very large for residential service.

Response: The laterals have been changed back to 4".

- 4. Sheet 1.02 Why has the water main size changed? Is this in the master plan approved by DDW? *Response: To avoid stagnation within the line*
- 5. Sheet 1.02 Design of dry utilities?

Response: Dry utilities has been added to plans.

6. Sheet 1.02/1.03 - Easement needed for SD/SS through open space. (open space vs PUE)

Response: Owner is working with Weber County to secure necessary easements.

7. Sheet 1.03 - Slope easement required on unplatted land north of road.

Response: Easement is shown on the design plans, and easement document is being drafted and will be submitted shortly.

OFFICES NATIONWIDE

8. Sheet 1.03 - Did subdrain move? If so, revised easement required.

Response: Subdrain moved slightly due to revised grading. New easement is not required. Plat note #28 identifies a 10-foot wide slope drain easement, 5 feet on each side of the as-constructed pipe alignment, in the approximate location as shown hereon.

9. Sheet 1.03 - Appears SD in Summit Pass and through unplatted land has been revised to tie into revised SD on Copper Crest. Revised sheets for Summit Pass project required. Revised easement for unplatted land required. (REV 16)

Response: Revised sheets have been submitted. Owner is working with Weber County to secure necessary easements.

10. Sheet 1.03 - SD/SS easement note refers to plat - are you planning on filling a revised plat? If not, please remove reference.

Response: removed reference to plat

11. Sheet 2.00 - Fire department approval for road greade of 12.89%?

A. Backfill: Common fill, APWA Section 31 05 13. Maximum particle size 3-inches. B. Flowable Fill: Target is 60 psi in 28 days with 90 psi maximum in 28 days, APWA Section 31 05 15. It must flow easily requiring no vibration for consolidation.

3. EXECUTION

A. Trench Backfill:

- 1) DO NOT USE sewer rock, pea gravel, or recycled RAP aggregate as trench
- 2) Maximum lift thickness is 8-inches before compaction. Compaction is 95 percent or greater relative to a standard proctor density, APWA Section 31 23
- 3) Water jetting is NOT allowed.
- 4) Submission of quality control compaction test result data developed for haunching areas may be requested by ENGINEER at any time. Provide results of tests immediately upon request.
- B. Flowable Fill: When required, place controlled low strength material in the trench, APWA Section 31 05 15. Cure the fill before placing surface restorations.
- C. Surface Restoration:
 - 1) Landscaped Surface: Rake to match existing grade. Replace vegetation to match pre-construction conditions. Follow APWA Section 32 92 00 (turf or grass) or APWA Section 32 93 13 (ground cover) requirements.
 - 2) Paved Surface: Do not install asphalt or concrete surfacing until trench compaction is acceptable to ENGINEER. Follow APWA Section 33 05 25 (asphalt surfacing), or APWA Section 33 05 25 (concrete surfacing).

PAVEMENT RESTORATION_ (PLAN 255 OR 256) LANDSCAPE RESTORATION EXISTING PAVEMENT MAGNETIC MARKING TAPE MAX. DEPTH = 18" -BELOW FINAL SURFACE IF DEPTH OF TRENCH IS GREATER THAN 4 FEET AND FLOWABLE FILL ALLOWED ONLY TO THE TOP OF THE EXISTING SUBGRADE BACKFILL (NOTE 3A) SHORES OR TRENCH SUPPORTS ARE NOT USED, SLOPES ARE REQUIRED. SEE OSHA REGULATIONS PIPE ZONE (SEE DRAWINGS OR PLAN 382)

Pipe zone backfill

GENERAL

A. Install the pipe in the center of the trench or no closer than 6-inches from the wall of the pipe to the wall of the trench.

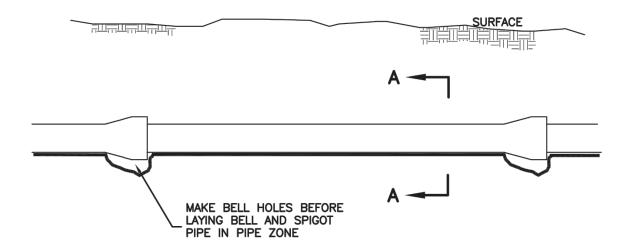

2. PRODUCTS

- A. Base Course: Untreated base course, APWA Section 32 11 23. Do not use gravel as a base course without ENGINEER's permission. B. Backfill: Common fill, APWA Section 31 05 13. Maximum particle size 2-inches.
- C. Concrete: APWA Section 03 30 04.
- D. Flowable Fill: Target is 60 psi in 28 days with 90 psi maximum in 28 days, APWA Section 31 05 15. It must flow easily requiring no vibration for consolidation.
- E. Stabilization-Separation Geotextile: Moderate or high at CONTRACTOR's choice, APWA Section 31 05 19.

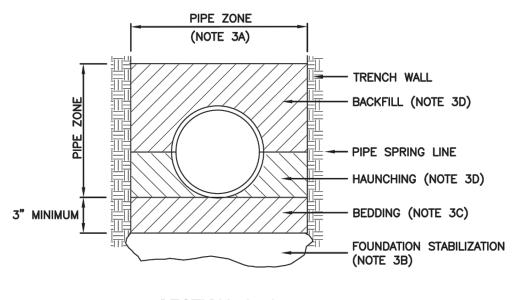

3. EXECUTION

- A. Excavate the Pipe Zone: Width is measured at the pipe spring line and includes any necessary sheathing. Provide width recommended by pipe manufacturer. Follow manufacturer's recommendations when using trench boxes.
- B. Foundation Stabilization: Get ENGINEER's permission before installing common fill. Vibrate to stabilize. Installation of stabilization-separation geotextile will be required to separate backfill material and native subgrade materials if common fill cannot provide a working surface or prevent soils migration.
- C. Base Course:
- 1) Furnish untreated base course material unless specified otherwise by pipe
- manufacturer. 2) Maximum lift thickness is 8-inches before compaction. Compaction is 95 percent or greater relative to a modified proctor density, APWA Section 31 23
- 3) When using concrete, provide at least Class 2,000 per APWA Section 03 30 04. D. Pipe Zone: DO NOT USE sewer rock, pea gravel, or recycled RAP aggregate in the
- pipe zone. Water jetting is NOT allowed. 1) Maximum lift thickness is 8-inches before compaction. Compaction is 95 percent or greater relative to a modified proctor density, APWA Section 31 23 26
- unless pipe manufacturer requires more stringent installation. 2) Submission of quality control compaction test result data developed for the haunch zone may be requested by ENGINEER at any time. CONTRACTOR is to provide results of tests immediately upon request.
- E. Flowable Fill (when required and if allowed by pipe manufacturer):
- 1) Place the controlled low strength material, APWA Section 31 05 15. 2) Prevent pipe flotation by installing in lifts and providing pipe restraints as
- required by pipe manufacturer. 3) Reset pipe to line and grade if pipe "floats" out of position.
