### Submittal Checklist

The application shall include a Storm Water Pollution Prevention Plan which meets the criteria set forth in Section 33-3-4 of the county ordinances.

The applicant shall file the application on or before the following dates:

- Subdivision:** The date that the applicant submits the preliminary subdivision development plat application.
- Site Plan:** The date that the applicant submits a site plan application or amended site plan.
- Building Permit:** The date that the applicant submits a building permit application if the applicant proposes to construct a building on an existing lot or parcel.
- Land Use Permit:** The date that the applicant submits a land use permit application.
- Other:** At least two (2) weeks before the developer intends to perform any type of work not listed above that would require a Storm Water Construction Activity Permit pursuant to this Chapter.

Failure to acquire a required Storm Water Construction Activity Permit is grounds for tabling a related subdivision application, site plan application, conditional use permit application, or building permit application. It is unlawful to commence work (move dirt) on a development site before obtaining a required Storm Water Construction Activity Permit.

Note: A pre-construction meeting is required before performing any on-site earth work, unless waived by the county engineer.

### Applicant Narrative

Please explain your request.

we plan to build a new home with a septic system & driveway on the property.

### Authorization

By signing below the Owner / Representative authorizes the county to enter the property to perform inspections.

Owner or Authorized Representative Signature 	Date <b>8/27/14</b>
Signature of Approval 	Date <b>8-28-14</b>

## Burt Willie Residence SWPPP

1. The new home, septic system and driveway will disturb approx. 20,800 Sq. Ft of area.
2. Peterson Builders Inc will be responsible for the site conditions during construction. Erik Peterson is the contact person reachable at 801-791-3734
3. PBI will use best practices outlined in this SWPPP to prevent any construction material from reaching neighboring lots.
4. Materials from excavation will remain on sight and be graded to naturally blend into the existing surface to create a yard around the new home.
5. A concrete wash out pit will be on site that can be buried as fill at the completion of the project.
6. See Site plan. The porta john will be near the cul-de-sac on the south side of lot.
7. See Site Plan. The construction entrance will be a new dirt drive constructed with aprox 4 inches of road base and a Gravel track pad. It will include a staging area of the same road base construction in front of the garage. The staging pad will be aprox 1000 Sq ft.
8. The track pad and material used for the driveway should prevent mud and dirt from being tracked onto pavement. In the event that debris contaminated asphalt road, the project manager will see that it is broomed or scraped in a timely fashion.
9. This is a flat lot. There are no swales or ditches.
10. The lot has a very gentle slope to the south. Most storm water gets absorbed into ground.
