		Estimated Start Date 11/15/2014	Actual Start Date

Submittal Checklist

The application shall include a Storm Water Pollution Prevention Plan which meets the criteria set forth in Section 40-3-4 of the county ordinances.

The applicant shall file the application on or before the following dates:

Subdivision: The date that the applicant submits the preliminary subdivision development plat application.

Site Plan: The date that the applicant submits a site plan application or amended site plan.

Building Permit: The date that the applicant submits a building permit application if the applicant proposes to construct a building on an existing lot or parcel.

Land Use Permit: The date that the applicant submits a land use permit application.

Other: At least two (2) weeks before the developer intends to perform any type of work not listed above that would require a Storm Water Construction Activity Permit pursuant to this Chapter.

Failure to acquire a required Storm Water Construction Activity Permit is grounds for tabling a related subdivision application, site plan application, conditional use permit application, or building permit application. It is unlawful to commence work (move dirt) on a development site before obtaining a required Storm Water Construction Activity Permit.

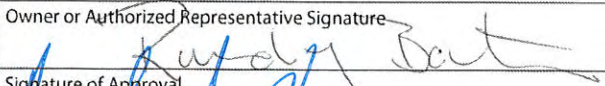

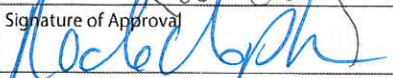

Note: A pre-construction meeting is required before performing any on-site earth work, unless waived by the county engineer.

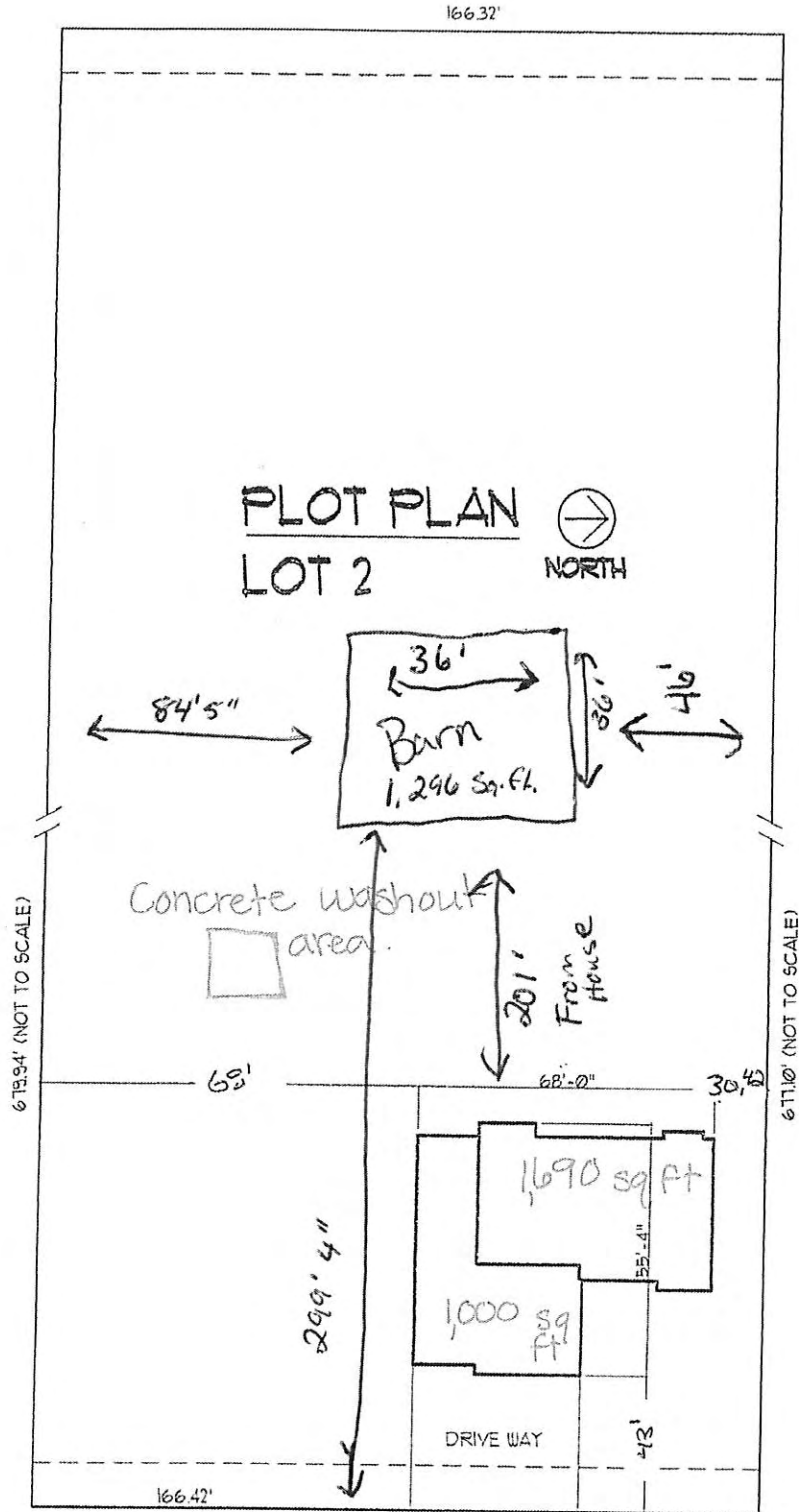

Applicant Narrative

Please explain your request.

Authorization

By signing below the Owner / Representative authorizes the county to enter the property to perform inspections.

November 7, 2014

In reference to the SWPPP Storm Water Pollution Prevention Plan:

1. The barn being constructed is 36' by 36' for a total of 1,296 square feet. The only ground to be disturbed will be digging 24" wide by 3' deep holes every 12 feet for anchoring barn poles.
2. All construction activity will not begin before 7 in the morning and will go no later than 8pm. The lot is 166' wide with the barn only being 36' wide and will be pretty much in the middle of the lot. It should not affect already existing houses or neighbors.
3. Any excavated material will be temporarily placed in a pile and used for landscaping around the new home currently being constructed at the front of the lot.
4. Please see the site plan for concrete washout area. I will use the existing concrete washout area currently being used by Graystone Development Inc. during the construction.
5. A portable toilet is currently provided by Honey Bucket and is installed with rebar ties at the front of the lot and within easy reach of the construction site.
6. On the north side of the lot a road is being constructed with road base and gravel for the entrance to the construction site.
7. There are no drain ditches or swales in the area to be protected
8. The construction site is in the middle of an alfalfa field. Rain storm water is used as irrigation to water the field and will not run off to surrounding parcels.
9. This lot has been flood irrigated for many years and is set up to keep excess water from running onto adjoining lots.
