Subject: Building Elevations

This project consists of a concrete water tank that will be completely buried, and a valve vault “bunker” that isn’t really a building, it’s an 80sf vault that will have a door on one side to access the valves and scada controls. The vault will be completely buried, other than the south side where the access door is located. There is an elevation drawing of this vault in the drawing package under “Engineered Plans” on sheet A-100
