Dana,

Please see below for responses to the Engineering Review 1.

I have had a chance to review the plan(s) and have the following comment(s):

1. Please address the statement in the geotech report and provide assessment from corrosion engineer: "In addition, due to low soil pH (acidic soil chemistry) identified in soils throughout the project area, a corrosion engineer should also provide an assessment of any concrete that will be in contact with native soils." (This may be addressed in the building permit project.) *See the attached letter from IGES, the original geotech report was written incorrectly. IGES has made the corrections to align with the intended text.*
2. If blasting is to be used, all necessary permits will be required. *Blasting will not be used, chipping & digging shall be the method of excavation.*
3. Note: A SWCAP and SWPPP have been received.

I have tried to address all items of concern from the Engineering Department. However, this review does not forego other items of concern that may come to this department's attention during additional reviews or during construction of improvements. If you have any comments or questions concerning this review, feel free to contact me.
