			Estimated Start Date Apr 1 14	Actual Start Date

Submittal Checklist

- ☐ The application shall include a Storm Water Pollution Prevention Plan which meets the criteria set forth in Section 33-3-4 of the county ordinances.

The applicant shall file the application on or before the following dates:

Subdivision: The date that the applicant submits the preliminary subdivision development plat application.

Site Plan: The date that the applicant submits a site plan application or amended site plan.

Building Permit: The date that the applicant submits a building permit application if the applicant proposes to construct a building on an existing lot or parcel.

Land Use Permit: The date that the applicant submits a land use permit application.

Other: At least two (2) weeks before the developer intends to perform any type of work not listed above that would require a Storm Water Construction Activity Permit pursuant to this Chapter.

Failure to acquire a required Storm Water Construction Activity Permit is grounds for tabling a related subdivision application, site plan application, conditional use permit application, or building permit application. It is unlawful to commence work (move dirt) on a development site before obtaining a required Storm Water Construction Activity Permit.

Note: A pre-construction meeting is required before performing any on-site earth work, unless waived by the county engineer.

Applicant Narrative

Please explain your request.

SFD

By signing below the Owner / Representative authorizes the county to enter the property to perform inspections.

Owner or Authorized Representative Signature 	Date 4-11-18
Signature of Approval 	Date 4-11-18

Storm water pollution prevention plan

Here is the answers to the questions provide by the Swpppp example

1. About 15,000 square feet of property will be disturbed or used to material stock pile
2. Brady Stoker is the contact for the project. 801-745-7497 and will maintain all Swpppp problems.
3. The neighbors will not be affected. I will place a berm of dirt to prevent water from running onto the neighboring property.
4. The excavated piles will be stored inside the work area that will be protected from storm water with proper swpppp
5. Concrete wash out is on the drawing and will be placed with a sign showing its location. The wash out will be excavated and lined with plastic to insure that no material is contaminated.
6. Porta Johns will be on sight and staked down so the wind does not blow them over.
7. The construction area will be built out of 1.5" rock to maintain track out. And will be in the front of the house where the most traffic will be located.
8. If mud is tracked to the asphalt I'll rent a broom and remove all mud from the asphalt road way.
9. The property natural drainage is to the north of the location of the house. I will install silt fence on the south side of the drainage to keep all silt from getting into the drainage. There will be about 200' of natural vegetation as well beyond the silt fence.
10. The water from storms now drains north.
