Submittal Checklist

The application shall include a Storm Water Pollution Prevention Plan which meets the criteria set forth in Section 33-3-4 of the county ordinances.

The applicant shall file the application on or before the following dates:

Subdivision: The date that the applicant submits the preliminary subdivision development plat application.

Site Plan: The date that the applicant submits a site plan application or amended site plan.

Building Permit: The date that the applicant submits a building permit application if the applicant proposes to construct a building on an existing lot or parcel.

Land Use Permit: The date that the applicant submits a land use permit application.

Other: At least two (2) weeks before the developer intends to perform any type of work not listed above that would require a Storm Water Construction Activity Permit pursuant to this Chapter.

Failure to acquire a required Storm Water Construction Activity Permit is grounds for tabling a related subdivision application, site plan application, conditional use permit application, or building permit application. It is unlawful to commence work (move dirt) on a development site before obtaining a required Storm Water Construction Activity Permit.

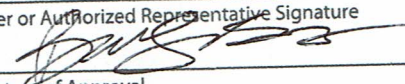

Note: A pre-construction meeting is required before performing any on-site earth work, unless waived by the county engineer.

Applicant Narrative

Please explain your request.
New home construction building permit.

Authorization

By signing below the Owner / Representative authorizes the county to enter the property to perform inspections.

Owner or Authorized Representative Signature 	Date 8/30/2019
Signature of Approval Braden Felix	Date 9-9-19

9207 E Kelley Drive Lot #11 Green Hill SWPP

Soil and Storm protection for neighboring properties

Lot # 11 Is located on the down hill side of Kelly drive. Kelly drive has no curb or gutter to channel storm water. No storm drain system is present. All previous storm water flowed down hill to the Drainage easement that all lots have designated for drainage. This area of each property is structure free.

Silt fences will be installed where necessary to prevent silt from entering adjoining property.

Storm water entering property

Storm water that has entered property in the past is assumed to be absorbed into the ground and/or traveled down hill to the designated drainage area . Any water that enters the property will continue to be absorbed in to the ground. In flooding event any unabsorbed water will flow into the designated drainage easement and a silt since installed to catch soil from entering the neighboring property. A flooding event has never been witnessed on this property. In a normal storm situation the water that enters the lot will be retained and absorbed.

Exiting soil and dirt prevention

The closest pavement is located on Kelly Drive. The access to the Lot will be a gravel/road base access which will be the driveway of the new home. Any mud and dirt shall be cleaned off transport before entering pavement. All mud and dirt the happens to fall on pavement shall be immediately removed.

Permanent and temporary excavated material

All excavated materials shall be used to backfill around the perimeter of the new home and new material will be brought in to fill the garage, basement, and drive.

Concrete wash out

Concrete washout shall be constructed with a liner to prevent seepage and a berm to prevent overflow. Washout shall be maintained and removed by contractor.

Entrance to site

Entrance to the site is indicated on site map. It shall be constructed of 6"minus pit run, gravel, and/or Road base.
