

Memorandum

To: Tucker Weight, P.E.
Weber County Engineering Department

From: Mark T. Miller, P.E. 
Wasatch Civil Consulting Engineering

Date: August 25, 2022

Subject: **Bright Acres Subdivision – Liberty**

I was requested by Shaun Story, a contractor in Liberty, to inspect the subject subdivision access located at 5638 N. and 3100 E. in Liberty, Utah.

I observed compaction and inspected UTB depth in seven locations. The average depth of my seven measurements was 8.75 inches. I also detected the subgrade (visible near the connection to the paved roadway), consisted of aggregated small rock and soil.

Although relative compaction tests were not provided, the road base access appeared to be compacted very well.

I will email all photos to you for your files. If you have any questions, please give me a call.
