	Actual Start Date <u>                    </u>

### Submittal Checklist

The application shall include a Storm Water Pollution Prevention Plan which meets the criteria set forth in Section 33-3-4 of the county ordinances.

The applicant shall file the application on or before the following dates:

**Subdivision:** The date that the applicant submits the preliminary subdivision development plat application.

**Site Plan:** The date that the applicant submits a site plan application or amended site plan.

**Building Permit:** The date that the applicant submits a building permit application if the applicant proposes to construct a building on an existing lot or parcel.

**Land Use Permit:** The date that the applicant submits a land use permit application.

**Other:** At least two (2) weeks before the developer intends to perform any type of work not listed above that would require a Storm Water Construction Activity Permit pursuant to this Chapter.

Failure to acquire a required Storm Water Construction Activity Permit is grounds for tabling a related subdivision application, site plan application, conditional use permit application, or building permit application. It is unlawful to commence work (move dirt) on a development site before obtaining a required Storm Water Construction Activity Permit.

Note: A pre-construction meeting is required before performing any on-site earth work, unless waived by the county engineer.

### Applicant Narrative

Please explain your request.

**single family residential house**

### Authorization

By signing below the Owner / Representative authorizes the county to enter the property to perform inspections.

Owner or Authorized Representative Signature <b>Ambree Heslop</b>	Date <b>3/17/14</b>
Signature of Approval <b>Robert Ph</b>	Date <b>3-17-14</b>

# Storm Water Pollution Prevention Plan (SWPPP)

Brody & Aubree Heslop Home

March 16, 2014

1. The total area that will be disturbed is 4,000 square feet.
2. The owner/builder will be responsible for the conditions of the construction site during construction.
3. To prevent the neighbors from being affected by the construction activities, the owner/builder will pick up visible debris (Ex. nails, wood, materials, etc.) on site and down the road leading out of the subdivision each day. The debris will then be put into a trailer and taken to the Weber County landfill when the trailer is full.
4. All excavated material will be used for backfill. There will be temporary mounds of sand only placed on the lot.
5. The concrete washout will be maintained by having the trucks wash out where the driveway site will be. The final washout will be just at the end of the driveway where there will be a long area of gravel to be placed on the property.
6. The porta-johns will be placed by A Company Inc. on the northeast corner of the lot. They will be maintained by the A Company Inc. as well.
7. There is no curb and gutter, and it is a rural acre lot. So even though they can enter anywhere on the east side of the lot, the entrance will be on the south-east side of the lot. Each company contracted out will be notified of the entrance and visual cues will show them where to enter.
8. In regards to what we will do when mud or dirt gets tracked on the asphalt: There is grass on the entire lot. And it is very sandy soil. It does not make mud. Even when wet, it's not muddy. Therefore, it will not stick to tires and be tracked into the roadway. But, if by chance there was mud on the asphalt, we have a temporary water connection where we will hook up a hose and spray off any mud and/or dirt.
9. There is no drainage ditch or swell on the property. But, there is a small irrigation ditch following the property line on the west end. It will not be affected, because it is too far from the construction site.
10. Water never stands or runs on sandy soil. It is only absorbed down through it. But, if by chance the rain/storm water reaches the project site, it would go into the irrigation ditch, pass safely behind the neighbor's land, and down to the slough.
11. Previously, the lot was a livestock pasture. And now it'll be a residential home.

Dry Irrigation Ditch
