

Building Elevation

Nordic Valley - Yurts Project
Permit Number: CUP2020-03

Two of the yurts will be built at 5,400ft of elevation at our base area. The third and final yurt will be built at 7,050 ft. of elevation near the top of our Express Chairlift. (See site plan for location)

All three yurts are 15.8 ft high in elevation sitting on a wooden deck structure 24 inches off the ground. (see image A)

The yurt will be Green of color on the outside panel while the roof will be beige. The colors will be exactly like the existing yurt you can see below. (see image B)

The two proposed yurts are exact replicas - same company and yurt size - of the one we currently have on site. See picture below (image B) from the Colorado Yurt Company - Full Snow and Wind Load Report
