Re: Ogden Filter Plant Reconstruction Project

Greetings,

The Ogden Filter Plant has access to 33.5 million gallons per day (MGD) of water when the plant is in operation. 20MGD is available when the plant is not in operation. This will be sufficient to meet the needs of the new facility. Pumps at the plant pressurize the system to a pressure that exceeds the State minimum requirements.

Sewer needs at the facility are limited. Any waste from wash down procedures or filter backwashing is recycled at the plant. The small stream of waste consists of a men's and women's restroom, a lab and a small kitchen area.

The new facility will not be in operation 24 hours a day. The result is a smaller waste stream than existed previously. This waste will continue to be processed by the existing septic system.

Please contact me with any questions you may have.

Sincerely,

Kenton Moffett, P.E.
